BANKER ARGUES THAT WEST WILL HAVE FAT YEARS

Satisfactory Conditions as Regards Reserve of Moisture ON SOUNDER BASIS

After Experiences of Recent Years Western Farmers Should be Ready to Save More Money

With the forthcoming crop such an important factor in relation to the buying power of the Canadian people—both farmers and those dependent upon supplying the agricultural community—the western situation is of even more than usual interest. Recent reports have indicated that operations on the land have been delayed by storms but the moisture resulting therefrom has put the land in unusually good shape. Westerners report that old-timers declare that “this seems like an old time spring; conditions are as they used to be when we got good crops,” etc. There was a great abundance of moisture last fall and the frost went down to a greater depth in most districts, than has been the case for some years; this freezing acts as a sub-soiler, breaking up the hard-pan or crust below the plowing.

Commenting hopefully on this situation, H. O. Powell, general manager of the Weyburn Security Bank, who has a thorough knowledge of Western conditions generally and is very closely in touch with the situation in Southern Saskatchewan, particularly, points out that another “thing of interest is that statistics show that wet years and dry go in fairly regular cycles and also that hot and dry seasons have a certain amount of regularity as to recurrence.” Continuing along this theory Mr. Powell calls attention to the fact that “there was a dry hot period in the 90's, very similar to the one we have just been through; after that nothing but fairly good crops or big crops were raised in this part of the West until after 1916 when we went into a dry period again.”

Fat Years Ahead

Estimating on the basis of statistics Mr. Powell believes “we should be about ready for the next cycle of more than average moisture in this district; if that is so we can naturally look for another period of good crops; and with the temper of the people as it is at present, debts will be paid and savings accumulated to a greater extent than ever before in our history.” Speaking of the attitude of the people he continues:

The people in the West are not giving up and although some have the blues the greater portion have simply made up their minds to stick and to win. We have produced good crops in the past and will in the future and when we do produce again there will be a larger percentage of the proceeds saved than ever before in Western history. The people who settled here first had everything to buy and everything to build. This is not the case now and the next thing to happen will be increased savings accounts.

Farmers intend to hire as little help as possible, make what they have go as far as it will, and are getting a wholesome respect for debts; a few years ago the accumulation of so-called property, even though there was no equity in it for the holder, was the principal thing which engrossed the attention of the majority.

The General Situation

The general business situation shows little definite change. Confidence in the future is being more and more emphatically shown by the buying of industrial securities but there is a distinct difference of opinion in trading circles as to whether this is actually justified or whether prices are being carried forward on what the public has turned into a purely speculative movement. It was generally recognized that stocks when neglected by the public were for months very cheap. Recently they have advanced very rapidly. Such a movement was to be expected and there is no doubt but that the present prices should be justified in the future; the speculative point is whether the future is being discounted to an unhealthy extent. Hayden Stone & Co. commenting on the situation in the American market point out that stocks are passing from strong to weak hands; however “there is no reason to suppose that this eight months' movement has measured the extent of the advance; business must come near to realizing what the market has predicted for it before the latter begins to discount another turn downward.”

Building reports indicate some increase in volume, which is perhaps greater than shown by the figures, because of the reduced costs. However, there is no greater sign of expansion.

(Continued on Page 9)

Ask Government to Take Over Nipigon

Fort William is calling upon the Ontario Government to take over the Nipigon development, sell power at a reasonable price and assess the excess cost of Beck's blunder on the taxpayers of the province. Following is a resolution passed by the city council which is along the lines of another passed by the Board of Trade. “That we recommend the City Council to petition the Ontario Government to take over the Nipigon power development from the Hydro Electric Power Commission, absorb the excess cost and offer power for sale at a price that will attract consumers, and that action be taken forthwith to accomplish this end.”

LISTOWEL PROVES EASY THING FOR GLIB PROMOTERS

Town Makes a Loan and Citizens Take Up the Stock

When the town of Listowel announced through the Toronto papers that anyone wishing to establish a manufacturing industry there would receive substantial assistance from the municipality, it issued an invitation to the Wallingford clan which was not long ignored. Appeared three Americans with ideas plus cash minus. They modestly proposed to establish a plant to manufacture the Perfect Wheel. They had all the necessary drawings and pictures and were strong on descriptions of the wonders of their invention.

The makers of the Perfect Wheel were received with open arms in Listowel. There were big hearts rather than hard heads on the reception committee. A public meeting was called and when the visitors had told all about themselves and what they could do the doubters were silenced, if not convinced. The next natural step was to submit a by-law to make a loan of \$25,000; it carried. A building was secured and fitted up in great style although more money could perhaps have been spent to advantage on machinery and equipment than on plumbing and furnishings.

The next step was to let the kind-hearted citizens in on the proposition. They came to the extent of \$29,725. Everything looked rosy—but not for long. “Soon,” writes a prominent citizen, “it became evident that the patents were worthless; the machines were seized under manufacturers' liens and the bubble blew up.”

Listowel now has a number of wiser and sadder citizens who have paid the usual market price for their experience. And, according to the hard-headed—but evidently not extensive—element in the community, it is not the first time. Methods change—this was a loan and not a mere bonus which the town put up—but the results are much the same.

Faith is a wonderful thing but too much of it should not be placed in smooth talking strangers who are willing to back their wonderful formulae against home-brewed capital.

RATIFY BOND ISSUE

From Our Own Correspondent HALIFAX.—At the annual meeting of the Nova Scotia Tramways and Power Co. an issue and sale of \$1,250,000 par value 7% general mortgage bonds was ratified. The proceeds will be used to meet on June 1 the company's maturing issue of 7% coupon notes.

MOISTURE BEST IN TEN YEAR PERIOD

Expert Opinion Very Favorable on Western Crop Prospect

Moisture conditions over all three provinces is perhaps the best for ten years, although there are some points in Southern Manitoba and all of Alberta which would be the better for further precipitation, according to P. M. Robinson, in the Grain Trade News. However, most of Saskatchewan and very large sections of Manitoba got such a soaking last fall that no apprehension need be felt for some time. Alberta has not been so fortunate, but the Southern part of the province has had some very welcome moisture in the shape of sleet and snow this spring. Northern Alberta is perhaps the driest portion of the west to-day, which is in very marked contrast to the general state of affairs.

Out of the last blizzard which covered the west from the 7th to the 10th some Saskatchewan points got heavy precipitation, Estevan with 1.70, Humboldt .94 and Kamsack with .74 being cases in point.

TRUE FIGURES OF RAILWAY LOSSES ARE NOT SHOWN

Some Important Omissions As Regards Capital Charges

WHERE ARE WE AT?

Truth About Government Ownership of Roads Will Never be Known Until Proper Accounting Principles Are Adopted

Special Correspondence

OTTAWA.—It is inevitable that the matter of Government bookkeeping will receive constructive attention during the current session of Parliament. The need for reform is urgent. Betterments in the auditing system are being demanded, and the two things are very closely linked together. Sound accounting is simply common sense, and anything else is misleading and, in a sense, dishonest.

This matter comes up sharply in connection with our railway problem. People quite naturally want to know and in fact, have the right to know, what are the annual losses on the Canadian National system. They certainly cannot find the answer in any official publication of any sort whatever. The present railway group is composed of certain corporate lines joined up with the old Intercolonial, the Transcontinental, the Prince Edward Island and about a dozen branch lines. On the corporate lines standard accounting obtains. On the government lines complete information is to be had as to operating results; but capital accounts simply do not exist—that is not in accordance with any system of accounting which shows the facts.

Where Are We At?

It happens that correct capital accounts are of the greatest importance at this juncture, since they would show the fixed charges. These fixed charges rise in volume enormously above the operating losses, and are absolutely vital if the truth is to be known as to what our venture into public ownership is costing us. They probably amount to \$100,000,000; but anybody may say within \$10,000,000 of what they are, owing to the absence of a proper capital account. If a business man kept his books in that way, he would not only be ignorant himself of his true position, but would be quite unable to issue a statement which would be of the slightest value.

What is left out of the government accounts is really of greater significance than what is put in. For example, when the Minister of Railways made his statement to Parliament last year he announced that the deficit was \$70,331,775; but he added, “This does not take into consideration any interest or fixed charges on the Transcontinental or Intercolonial Railways.” But why not? It included the fixed charges of the Canadian Northern and the Grand Trunk Pacific, which were no more a part of the fiscal total than were the interest liabilities of the other roads.

In the statement which the present Minister of Railways made to Parliament the other day, another equally flagrant departure from sound accounting occurred. Referring to the liability incurred by Government on account of cash advances made to the Canadian Northern and Grand Trunk Pacific, he said the amount was \$333,568,652, but added, “these figures do not include accrued interest due to government of \$35,191,210 by the Canadian Northern and \$14,729,239 by the Grand Trunk Pacific.” Such an omission does violence to the very elementary principles of accounting.

Modern Ideas Ignored

Thus it occurs that we shall never know where we stand in this matter of railway losses until correct bookkeeping is set up. There is nothing whatever in the nature of a system at the present time. More than half a century ago Government began to keep its accounts in a certain way, and has stuck to that way ever since. It now happens that a knowledge of the facts is important, yet nowhere can they be had. If a statement were made up in precisely the way a bank would prepare it, or as the Canadian Pacific would prepare it, there can be little room for doubt that the people of the Dominion would be startled by the volume of loss which is now omitted from the totals announced by the Government; and concealing the true figures does not alter them in the slightest degree.

Heads We {The Inside Ring} Win Tails You {The Poor Shareholders} Lose

SOME further particulars in regard to the series of “silent” partnerships that are indulged in by directors of Canada Steamship Lines may be of service to the shareholders in any action they may contemplate to clean up a situation that has played havoc with public confidence in the management of the company and has reacted to the injury of its securities.

Mention has been made of the STANDARD SHIPPING CO. There is an interesting connection between this and some of the directors of the Steamships Company. This appears to be another example of those apparently accidental monopolies that have developed, much to the advantage of the private profits of certain directors and interests closely connected with them, but of far less obvious advantages to the company itself, and therefore to its shareholders.

It is the common understanding among grain men that the Standard Shipping Company enjoys the privilege of chartering every cubic foot of space used in the shipment of grain on the boats of Canada Steamship Lines, including those of the Montreal Transportation Company, coming down from Port Arthur and Fort William to Montreal and other ports. “No others need apply.”

It does not require any particular demonstration that the Standard Shipping Company partakes of a commission on every contract for space in these vessels which it makes with shippers of grain. It matters not whether, in poor times, the Steamship Company should be carrying a loss, or whether, through its being tied up with the one company, it might be carrying grain at a lower rate than it could have secured if it had made the bargain itself. The commission still goes to the Standard Shipping Company.

Now who are those that enjoy these commissions? Frankly, we feel they are too intimately associated with the management of Canada Steamship Lines to satisfy the shareholders of that company, and prospective

Continued on page 16.

Diplomatic Flim-Flamming

IT IS HARD to understand the official attitude of the powers towards the Russo-German arrangement. It is described as dishonest and it probably may be, but who, outside of diplomatic circles, expected anything else? It is also quite possible that the discovery or announcement has not in reality caused the alarm credited to it. Apart from the ethics of the case such an arrangement seems very natural. Here are two national communities, neither of which has a friend among the other nations of the world and this of itself would be a powerful factor in bringing them together. They, to some extent speak the same kind of diplomatic language and no one is willing to even negotiate with them without adequate and tangible security. There is this difference however, and it is somewhat to the credit of Lenin at that, he is not cringing, as is the German custom, when the other side is on top. This unpleasant German trait has been noted as a characteristic of the nation since the time of Caesar, whose opinion of them was like that of Lord Roberts, that the Germans were constantly either kissing or trying to kick an important though rather despised part of the anatomy of their fellows.

Much is made of the agreement to eventually cancel their claims for indemnity but as these could be satisfied in Russia in rubles and in Germany in marks, and these are easily created by the printing press, neither side is giving up anything though it has a most portentous sound.

Both countries will eventually repudiate the bulk of their paper money. France did it after the revolution with the assignats by which she had financed during the convulsion. These assignats were finally redeemed at about 3 cents on the dollar, and as things gradually settle in Russia and Germany, some such arrangement will no doubt eventually be made to retire the mass of paper rubles and marks which are at present clogging the wheels of trade.

Save the Children Misrepresentation

THE GLOBE accuses THE POST of cruelty in opposing contributions to aid deserving Russian famine sufferers. The statement is untrue. We distinctly stated on March 3:

We have pretty well all we can do taking care of our own destitute at this time. But we can do that and still have some to spare for less fortunate foreigners and particularly for suffering but deserving Russians.

The fact that these people have been so fearfully exploited by, and are still under control of a group of grasping foreigners, is no reason why we should withhold our aid. We should have no sympathy with those who suggest they should be allowed to suffer. The difficulty is to know how we can get our contributions to the real sufferers. We do know that during the last year or more large sums have been collected in Canada which never went beyond the Soviet propagandists within our own borders. Of the many so-called Russian Relief funds, we know of but two that are perfectly legitimate. So crooked are Soviet conditions that persons in this country desirous of sending money to their families in Russia, are advised not to do so as only a small per cent, if any, will get to them even through British and United States official channels. The real Russian Red Cross of the war days, still in existence, advise their British colleagues against supporting any of the Soviet schemes and go so far as to say that internal conditions in Russia are morally as bad as in the worst days.

It is the knowledge of these conditions that has made the always generous Canadians hesitate. It has made the British hold back, and the Americans and the French.

THE POST is strongly opposed to the “Save the Children Fund” as it has been carried on hitherto. We have said that the policy favored more of saving Lenin and Trotsky than of Saving the Children. Several leading newspapers are now saying so also. We said that these men had made every effort to get Canada and the United States to officially recognize them; that failing to get Canadian Government recognition by promises of big orders for Canadian goods, which promises they would be unable to fulfill, they did get the Canadian Government and leading public men to endorse them through the “Save the Children Fund.” This endorsement has given tremendous impetus to the Soviet propaganda in Canada for creating discontent, for setting class against class.

The names of the Prime Minister, the two leaders of the Opposition, the Chief Justice of the Supreme Court and others are being signed to advertisements in Canada that are not truthful. And the Daily Express, London, owned and edited largely by Canadians; openly charges that there is a great big graft in British Save the Children Funds. As we go to press an A. P. despatch says the Soviet is sending out \$300,000,000 gold, much of it under fictitious names.

The Canadian advertisements have given the impression that the Government would appropriate public moneys for Russian relief work provided the move is supported by voluntary subscriptions by the people. We are informed that this statement is absolutely untrue. All the Canadian Government promised was “to co-operate with such a responsible organization towards rendering effective such measure of relief as it (the organization) might undertake.” This the Government has done.

The advertising states that Herbert Hoover on behalf of the United States had given assurance that all foods sent to the famine districts are carefully guarded and reach their destinations intact. Herbert Hoover has given no such assurance. On the other hand he states: “I have considered at all times that American charity to all countries should be distributed in the name of America under active American personnel with a view to assuring efficient handling and distribution of supplies under American direction inside Russia.” Further, we are informed that American authorities under Mr. Hoover's instructions investigated some 200 so-called Russian relief organizations in the United States and Canada and found that they “are frankly communistic committees appealing to the communistic sections.”

We have said all along that such Canadians as wish to aid should do so through the Canadian Red Cross, whose official position, freedom from politics, long history and reputation are above reproach.

FORDNEY TARIFF NOT SO BAD AS IT IS PAINTED

Agnes Laut Says Not to Howl Until We Are Hit

HOW IT WORKS OUT

Looks at First Like a Death Walloper to the Canadian Producer of Wheat and Live Stock—But Look Again

By AGNES C. LAUT. Never howl before you are hit—that homely maxim would be a good one for Canada to observe regarding the Fordney Tariff Bill as reported from the House to the Senate.

There will be a lively scrap over the bill before it passes the Senate; but the scrap will not be over the sections reacting on Canadian exports. The big scrap will be over the American valuation plan—which means taxing imports at the value of American cost, not foreign costs; and from the lists of cheap labor stuff coming into the United States just now, I think Mr. Fordney is right. With the German mark at 1/3c on the dollar, Germany is right now flooding the American market with cheap imitation chamois gloves at 12c a pair, which really gives Germany 36 marks a pair; and Americans cannot produce gloves at that price and pay a living wage. American glove factories are already closed and half the textile mills in the country are on strike over a reduction of wages; but such big importers of foreign goods as the departmental stores are going to give Mr. Fordney the fight of his life over this feature; for the retailers are holding up to the American retail prices, though they are getting the goods at the cut of the low cost German production.

A Farmers' Tariff

There was probably never a more extraordinary tariff bill presented to Congress. It is more a farmers' tariff bill than a manufacturers'. Almost every item in farm equipment is put on the free list. Almost everything the farmers produce is protected by the highest of high tariffs. Take a look at the free list:—agricultural implements, except law mowers, which are chiefly bought by the town man, acids going into the manufacture of fertilizers, animals imported for breeding purposes, vaccines, serums, anti-toxins, bagging gunny cloth, binder twine, fish, blood fertilizer, sewing machines, coal, coke, shale, petroleum oils, tar oils, copper ores, sulphites, drugs (mosses, roots, herbs), grasses, ropes, hides, rubber, iron ore, kelp, harness, leather, asphaltum, wood pulp, mineral crude oil, nuts, oakum, oil seeds, olive oil, all petroleum, ores of all metals, potash, rag plug, sago, shell-fish, nitre, print paper, all paper products, tea wax, wearing apparel up to \$50, barb wire, unmanufactured wood (not shingles), furs, fur skins. If you look over this list, there is hardly an item that will not benefit the American farmer.

In Canadian Eyes

Now please look over it with Canadian export eyes.

Of almost sixty items, Canada is an exporter of over forty. Of these exports, her petroleum may in ten years jump to a total of \$200,000,000, the story of which I shall tell more fully during the summer. Her lumber and paper exports run over \$200,000,000, and if she could break through the retailers' ring on this side of the line by a Canadian distributing market system straight to the retail buyer, she could export a billion of these products. There is a supply shortage of building materials in the Eastern States alone just now of over two billion dollars, and for the first time in ten years in the Eastern States the builders' illegal rings in the East have been broken up by legal proceedings.

West of the Mississippi far south as St. Louis is a market for hard and soft coals of 44,000,000 people. Average the family unit at five, the consumption of coal at ten tons, there is a market for 80,000,000 tons of coal. Yet all Canada's big coal areas in the West last year were shut down except two for lack of a steady all-the-year round market, and for lack of low enough freight to put that coal cheaply in the consumers' hands. One of the biggest soft coal mines can hydraulic its output at a cost of 50c a ton. Yet that mine was shut down because it couldn't sell its output. It is on the Canadian Nationals; and

OPPORTUNITY FOR INCREASED TRADE IN WEST INDIES

Trade Commission Find Merchants There Wish to Deal With Us

BUSINESS RECOVERING

Canadian Banks Enjoy High Standing and Will Play Important Part in Development Work

Thirty members of the Canadian Manufacturers Association returned to St. John on April 12 after an eight weeks' trip throughout the British West Indies. W. S. Fisher, president of the Association, in reviewing the results of the trip gave out the following statement.

We found Canada firmly established as the supplier of foodstuffs. Our virtual monopoly of the flour and fish trade shows what can be done when we possess natural advantages and get after the business. Our exports of manufactured goods are also on the increase, both from the point of view of quantity and number of lines. But we could clearly see that there was room for expansion and we were told that the best way of insuring that expansion was by personal representation. United States firms have their travelers constantly going through the British West Indies and I believe that this is by far the best method of procedure, for any Canadian firm which is satisfied that a good business may be developed in the lines they manufacture.

Canadian Banks Do Well

The development of our trade with these British Colonies will be assisted by various things—by the preferential tariff—by improved steamship service—by the activity of the Department of Trade and Commerce and by the facilities provided by Canadian banks which are located in the South. We were impressed by the volume of business done by these Canadian banks and by their evident high standing in the community. There were only two points we visited during our entire trip where we did not find a branch of the Royal Bank. The Bank of Nova Scotia was strong in Jamaica. We found the Canadian Bank of Commerce opening at various places and through the Islands we came in touch with the Colonial Bank, an English institution, in which the Bank of Montreal has recently acquired an interest. These banks are willing and able to furnish Canadian firms with credit reports on the houses in the South and they are sincerely anxious to assist Canadian trade by providing names or obtaining information of almost any description. The activities of the Canadian Trade Commissioners in the South will be an important development of our business.

Banks Can Give Information

I would like to say to those Canadian business men who have never visited the West Indies that one trip would remove all their fears in regard to the special risk of doing business in these places. The same caution that we use in Canada is all that is required in the South. Our banks can tell us which are the good firms and which are not, and let me say, that when they are good, they are very good indeed. In spite of prevailing business conditions, the majority of the exporting business firms are of high financial standing and worthy of reasonable credit.

Taking the British West Indies as a whole, sugar is the most important article produced, consequently the 1920 slump in sugar and later the disorganization of the sugar market had an adverse effect on business. Cocoa, too, has suffered from low prices. The market for these two has improved slightly during the past few months, while the cost of labor and supplies have declined.

Buy Direct

I believe that 1922 will be a better year for the British West Indies than 1921. Provided nothing unforeseen occurs, they should regain their normal purchasing power in the not far distant future. We heard it said in most places that Canada was not buying all the West Indian products she might. They are not entirely satisfied with the state of the sugar trade between us. Cocoa and coconuts, too, they think that we might buy direct in larger quantities. They ask Canada to buy direct from them instead of buying British West Indian products through other sources. In Dominica they pointed out to us the superiority of limes over lemons and were anxious to develop this trade with Canada in this article. There seems to be little doubt that our direct purchases from the British West Indies could be increased to our mutual advantage. On our side we pointed out that personal representatives which we thought so necessary for the sale of Canadian goods in the South was just as necessary for them,

if more of their products were to be sold here.

At the meetings of the Chambers of Commerce and the Agricultural Clubs frequent reference was made to the fact that documents covering shipments of Canadian goods were often late in arriving. This was causing a good deal of annoyance and delay to importers. Apparently some of the inland Canadian firms when shipping through Halifax have the documents sent back from that point to their offices in order to make out their drafts, whereas the only satisfactory mode of procedure is to have the documents completed by their agents or through their bank at the shipping point and dispatched on the same boat as the goods.

Another complaint of the opposite nature that we heard had to do with sight drafts arriving before the goods and being presented for immediate payment. It would be better for Canadian firms to give instructions that drafts were not to be presented before the arrival of the steamer carrying the goods.

DRUMMERS' EXPENSES ARE HIGH NOW-A-DAYS

Small Orders Bring Problem of Trying to Reduce Number of Trips

From Our Own Correspondent

LONDON.—An interesting situation which many firms in this district are trying to work out revolves around the changed conditions travelers are facing due to continued light buying by retailers. Many travelers are finding that they are only getting small orders which necessitates their going over their territory three or four times where they formerly went over it once. The added expenses of this and the lower prices is making their returns so small that they declare some other system will have to be worked out. Just what this will be they are not yet in a position to say but the matter is being taken up with many firms.

Another indication of the same thing is shown in the Dominion income tax returns. Inspector of Taxation, George Tambling, stated to THE FINANCIAL POST that he believes the returns from London and district this year will be at least 25 per cent. lower than those of last year. Many firms, he says, which paid large taxes a year ago will not pay anything this year. Lower wage schedules are also affecting many individual returns making them much smaller than formerly.

RECIPROCITY BRINGS INCREASED TRADE

Australia and New Zealand Both Buying Canadian Goods

VICTORIA.—Reports from Australia indicate that the reciprocal trade agreement negotiated between that dominion and Canada last December has already made a big difference in the trade of the two countries.

Canadian steel products are in much better demand in Australia than they were six months ago, according to M. P. Caffin, Auckland representative of several Canadian firms, who recently passed through here. He says that Canadian manufactured articles are being purchased in increasing quantities, and, without subordinating the element of quality in the goods, places much of the credit for this increase in trade on the reciprocal pact.

"People throughout New Zealand are now buying Canadian goods in preference to American," said Mr. Caffin. "Exchange is helping Canada, of course. Wool prices are going up in New Zealand, and that means increased buying power."

That sentiment is also an important factor is shown by the fact that a New Zealand firm recently placed an order for 2,000 wooden doors with a Victoria lumber mill when it could have bought almost ten per cent. cheaper in Seattle.

Until wages have been readjusted, it is not expected that New Zealand will buy much general lumber. On the other hand, Australia is expected to purchase \$120,000,000 worth of foreign lumber this year.

RAIL WAGES EXCESSIVE

Have Increased More Since 1914 Than in Other Fields

The U. S. National Industrial Conference Board has issued what it termed a "comprehensive study" of wages and working hours, in which it declared that wages paid by railroads of the country were higher than those paid by private manufacturing industries.

"Taking into account changes in the cost of living," says the statement, "the real hourly earnings of railroad workers in July, 1921, had increased 42 per cent. over 1914 as contrasted with a gain of 32 per cent. in the manufacturing field. Weekly earnings for railway men showed a gain of 2 per cent. against 13 per cent. for manufacturing workers in the same period."

Memorandum to Canadian Government Deals Frankly with Situation—Branch in Germany

From Our Political Correspondent

OTTAWA.—In an article in last week's issue figures were given covering the claims of Canadians against Germany for indebtedness on merchandise accounts and claims for sequestration of property, and also claims by German merchants against Canadians as well as those of Germans whose property in Canada has been taken over by the Government. The special report on the situation that confronts the Custodian deals also with the difficulties in settling the claims of Germans. Strange as it may seem, these are not at all anxious to be paid at the present time. Through a technical point the German Government, it is feared, would claim from 80 to 90 per cent. of any payments that may be made owing to the fact that these would be made in many times the number of marks that would have satisfied the debt in 1914, owing to the heavy depreciation in the value of the mark to-day. The Alien Property Custodian of the United States has estimated that those paid now would receive less than 10 per cent. of the face value of their claim owing to the heavy Government taxation in Germany.

"Enemy" Trading Resolutions Futile

In this memorandum that is being considered by the Dominion Government the position is taken first of all that it is immoral and contrary to international law to confiscate the property of individuals of an enemy country. It is held that sequestration under the Treaty is equivalent in effect to confiscation and that German property should be returned to the owners. The position is also taken that war time resolutions against trading with Germany are now futile and that a change has taken place in various countries on this point.

The conclusion, then, has been reached that the Germans would prefer to have their property in the sense of money owing to them, remain in Canada until present financial conditions improve. The suggestion has naturally followed that the sums of money that have or will accrue from the sale of enemy-held securities, and from the settlement by Canadian of the claims of Germans against them, should be transferred to a Credit Corporation for the purpose of financing trade between Canada and Germany. Thus the Germans would receive an immediate return from the prosperity resulting through increased trade, and Canadians would benefit by the establishment of a trade which does not now exist. Eventually, it is argued, all charges upon the property and all claims for illegal warfare could be paid out of the profits realized from this trading corporation and ultimately, when the corporation had made its profits and had been dissolved, the property would be returned in full to the Germans. An extension of the plan would establish a branch in Germany to facilitate trade there for Canada.

This proposition has not been made on the grounds of any good-will to the Germans or for the purpose of assisting them. The real basis is the benefit which would come to Canada through the maintenance by her of a point of international honor, and the immediate advantage through increased trade.

South Africa on 30-Year Basis

In South Africa the plan decided upon is to liquidate enemy property, pay all charges, and then invest the balance and issue certificates, payable in thirty years, to the German owners to the extent of the ascertained value of each individual's property. The objection to this method, it is pointed out, is the long delay caused the German beneficiaries.

DEMAND FOR WIRELESS

A Big Factor in Department Store Business

U. S. National Retail Dry Goods Association has prepared an analysis of wireless telephone conditions. Report shows 71 licensed broadcasting stations in United States, of which 7 are department stores, located as follows: Philadelphia 3, New York 1, Newark 1, St. Louis 1, Los Angeles 1.

Scores of applications for licenses have been filed by other stores throughout the country for radio is recognized as a merchandising opportunity of the first order with estimated annual volume of \$70,000,000. In many of large stores sale of apparatus averages \$5,000 to \$6,000 weekly in spite of shortage in both sets and parts.

THE UNION BANK OF AUSTRALIA, LTD.

Established 1837. Incorporated 1899.
Capital Authorized and Issued \$2,000,000
Capital Paid Up \$2,000,000
Reserve Fund \$2,750,000
Reserve Liability of Proprietors \$5,000,000
Head Office: 71 Cornhill, London, E.C. 3
The Bank has 163 Branches, viz.:
In Victoria 62
In New South Wales 38
In Queensland 19
In South Australia 14
In Western Australia 10
In Tasmania 5
And in NEW ZEALAND 48
Drafts upon these branches are issued by the Head Office and may be obtained from the Bank's Agents throughout the world. Commercial and Circular Travelling Credits issued—available throughout the world. Cable transfers are also made. Bills on the Australian States and Dominion of New Zealand are purchased or sent for collection.

**NEW HIGH TARIFF
DISCUSSED FROM
ALL STANDPOINTS**

Competition in World Mar-
kets to be Ultimate De-
ciding Factor

CONSIDER REPRISALS

Opinions are Sharply Divided
as to the Advisability of In-
troducing Counter-Protec-
tive Measures

From Our Own Correspondent
REGINA.—Members of the farm-
ers' party view with alarm prepara-
tions which are going forward in the
United States looking to further ad-
ditions to the already high penalties
imposed upon imports from Canada.

Two distinct opinions are held in
this regard, the first being that fur-
ther increase may incite agitation for
a combative protectionist policy. The
second is inclined to view the situa-
tion with more tolerance, contending
that higher U. S. import duties will
benefit Canada in two distinct ways,
viz.: by reducing Canada's external
purchases; by bringing about higher
prices for Canadian grown products
in times when over-exportation by U.
S. interests occurs.

Both schools of thought are in
agreement that Canada's external
markets for farm products will be
materially reduced and become less
accessible if the higher duties are
confirmed by congress; at the same
time they point out that U. S. wheat
must eventually enter into competi-
tion with Canadian wheat in some
common market outside of the Unit-
ed States and that the purpose of the
Fordney Permanent Tariff Bill
(which is designed to secure higher
prices for the U. S. farmer) will
therefore be defeated.

Opposed to Reprisals
Officials of the co-operative mar-
keting concerns in Saskatchewan
have gone on record as being opposed
to tariff reprisals which will mean an
increase in the price of supplies which
it is necessary for the farmer to pur-
chase, but the sentiment for tariff re-
prisals is present nevertheless and
certain sections—hitherto of free-
trade tendencies—are displaying a
leaning towards counter protection-
ist measures.

Whatever may be the sentiment of
the east as regards the new U. S. tar-
iff impositions, the west heartily dis-
approves, and should the proposals be
ratified a reaction of feeling very
harmful to American trade is certain
to result in this section of the coun-
try.

Those closely in touch with mar-
kets across the border contend that
the farmer has not benefited in any
way from the Fordney Emergency
Bill. Those who really reaped the
profits, it is pointed out, are specu-
lators who purchased wheat during
the rush to market in the early part
of the marketing season. When the
advance in prices did come, the farm-
er found that his wheat was all dis-
posed of and that the man who had
purchased and could afford to hold,
was the one who made the money.

Boosts U. S. Living Costs
Further study of the Fordney bill
reveals the fact that the effect of the
emergency legislation has been to in-
crease the cost of food to U. S. con-
sumers.

This is illustrated by the fact that
only when the U. S. exportable sur-
plus of wheat has disappeared—that
is when the great bulk of the U. S.
crop has been sold—can the protec-
tive tariff influence the trend of
wheat prices. At other times U. S.
wheat is in competition in world mar-
kets on the same basis with wheat
from other countries. It has been no-
body's business to see that sufficient
home-grown wheat was retained in
the U. S. to satisfy the domestic de-
mand; over-export therefore, is re-
sponsible for the rush to purchase
Canadian wheat and flour over and
above the usual demand for Canadian
hard wheat required by American
millers for mixing purposes which al-
so has been a considerable factor in
influencing the recent rise in prices
in the Canadian Northwest. As a
consequence of this, few, if any pro-
ducers in the United States have ben-
efited from the higher prices; the
consumers, on the other hand, being
required to pay premium on food pur-
chases commensurate with the duties
levied on Canadian wheat and flour
imports. These duties have necessi-
tated increases in the retail price of
bread and flour in the U. S. of re-
cent months. The average price of
bread materials in the United States
at the close of March was estimated
at 27 per cent. higher than the low
point of 1921. Further tariff increas-
es, therefore, it is plain, will only
have a tendency to hasten the re-
bellion of consumers against a
measure which confers no benefit
upon the mass of producers but at
the same time heavily penalizes the
ultimate consumer.

**Business Men Will
Bring Trade to Canada**

From Our Own Correspondent
FREDERICTON.—Following the
announcement that the Jamaica
Legislature had adopted the prefer-
ential trade arrangement with Can-
ada, the New Brunswick Legislature
adopted without a division a resolu-
tion advising the provincial govern-
ment to appoint one or more trade
agents to represent the province in
the West Indies. Premier W. A. Fos-
ter said New Brunswick needed addi-
tional markets for its forest and field
products, and he thought probably
new markets could be developed in
the West Indies. But while agreeing
with the purpose of the resolution the
premier declared that the province
did not need trade commissioners.
What was wanted was enterprising
business men who would go to the
West Indies and look up business.

**ALBERTA GOVERNMENT
TO LIST FARM LANDS**

Irrigation Trust Board to Co-
operate in the Coloniza-
tion Movement

From Our Own Correspondent
EDMONTON.—The Alberta Gov-
ernment is taking steps to secure
from landowners in the Lettbridge
Northern Irrigation district full list-
ings of lands that they will offer for
sale to incoming settlers. This is the
first move in the direction of a col-
onization campaign, which the gov-
ernment has announced must be carried
on simultaneously with the irrigating
project.

Meetings were held in the district
a short time ago, at which the scheme
was explained to the landowners, the
chief points being that land holdings
must be cut down to a satisfactory
area for operation under irrigation
and that the surplus areas shall
be listed for sale at a set price, which
it is suggested should not exceed \$70
per acre. The average holdings should
be reduced, it is claimed, to 160 acres,
as compared with about 225 acres at
the present time. The owners were
given until shortly after Easter to
make up their minds.

When the lands have been listed
they will be offered for sale by the
irrigation trustee board, under the
supervision of the Government, and a
commission of two dollars per acre
will be charged in case of sale. The
funds secured in this way will be used
by the Government in carrying on an
active colonization campaign, the cost
of which will in the meantime be ad-
vanced from the provincial treasury.

**BRITISH CAPITAL FOR
ALBERTA RESOURCES**

Reorganization of the Naka-
mun Coal and Gas Prop-
erties is Planned

From Our Own Correspondent
EDMONTON.—British capital is be-
ing sought for a reorganization of the
Nakamun coal and gas properties in
this district. The enterprise has been
revived under the name of the New
Nakamun Coal, Gas and Petroleum
Company, and George Westcott, its
promoter, has gone to England to
lay its working plans before Old
Country investors. A number of Bri-
tish shareholders who had invested
in the old company several years ago
have agreed to carry on in the re-
organized concern, and local share-
holders here are convinced that with
a little more capital the properties
can be made a success.

The Nakamun company has 2,100
acres of coal lands at Lovatt, in the
foothills, and an equal area of oil
leases in the Athabasca tar sand belt
with 400 acres of oil leases in the
Pouce Coupe district. For the pres-
ent the company's development work
will be concentrated upon the Lovatt
coal holdings, the plan being to in-
stall a plant this summer capable of
producing 1,000 tons per day.

PRICES NOW AND IN 1913
Comparative Figures From a Num-
ber of Countries

The U. S. Federal Reserve Board
which has received by cable the latest
statistical index numbers of prices in
the various countries, publishes the
comparisons in its latest Bulletin.
Based on average prices in each coun-
try during 1913 as 100, the latest re-
ported averages worked out as 167 in
England, 169 in Canada, 306 in
France, 166 in Sweden, 253 in Nor-
way, 182 in Denmark, 171 in Switzer-
land and 161 in Holland.

These comprise countries where the
currency is not greatly depreciated.
On the same basis of 100 for either
1913 or 1914, the latest German av-
erage works out 4,713 and the Bul-
garian 2,095. No computations are
published for Poland, Austria or the
other Balkan States.

Bill of \$100 submitted to Pennsylv-
ania for two sheep purchased July 2,
1780, for Washington's troops. Descend-
ants of Robert Morris to ask nearly
\$200,000,000 from government for loan
of \$1,500,000 by him to United States in
1781, with interest for 141 years.

**GENERATE STEAM
BY SURPLUS OF
ELECTRIC POWER**

Coal Strike and Freight
Rates Draw Attention
to New Method

INVESTMENT COST LOW

Operating Costs Vary Between
\$1.00 and \$3.00 per Kilo-
watt Capacity, According
to the Actual Tests Made

The generation of steam by elec-
tricity is receiving special attention,
due to the possible scarcity of coal
and the continuation of high freight
rates. Several large industrial con-
cerns have equipped their plants with
electric boilers. Ford's new River
Rouge plant is being so equipped, and
pulp and paper mills have used elec-
tric steam generation with great suc-
cess this winter. Many other plants
are now watching the result of these
tests with thought of adopting this
means to cut down their fuel bills.

F. T. Kaelin, who perfected the
apparatus is the chief engineer of the
Shawinigan Water & Power Com-
pany, and in speaking to THE FIN-
ANCIAL POST said that, "The cost
of the apparatus is a very small com-
pared with the ordinary steam boiler
and in general it can be said that the
cost varies between \$1.00 and \$3.00
per kilowatt capacity." For a descrip-
tion of the advantages and possibili-
ties of the apparatus we quote in
part from a speech delivered before
the Engineering Institute of Canada,
by Mr. Kaelin recently.

Under prevailing conditions where
electric power is sold on a kilowatt hour
basis, electric steam generation cannot
compete with steam produced by fuel,
but it is not beyond possibility that in
remote places where the cost of fuel
and freight are high, and the cost of
hydro electric development is low, the
electric steam generator with low cap-
ital investment and operating expenses
may become a competitor to the method
of generating steam by burning coal or
oil, but it is not necessary to consider
such an exceptional case to prove that
the generator fills well its place per-
manently as a transformer of idle power
into useful heat energy. We may con-

INVESTORS ARE NOW TURNING TO GOOD THE INDUSTRIALS

Past Week Has Been One of Tremendous Activity on Stock Markets

HEAVY PROFIT TAKING

Market Apparently Willing to Absorb Greater Amount of Sound Industrial Issues

Trading in very large volume, despite the holidays, has marked the course of the stock markets during the past week.

All that has been taking place in the market, brokers say, has been a discounting of the improvement in business and the recognition of easy money conditions.

With the mounting bond prices and the returning prosperity a trend toward investments in preferred stocks is noticeable.

Among the specific issues for the past week, the paper stocks have been leading. Abitibi has made great advance since the first of the year when it was quoted around 30.

LETTERS TO THE EDITOR

Editor, The Financial Post:

Sir,—I am a holder of fifty shares of the Toronto Street Railway stock, and I am taking the liberty of writing you these few lines relative to same.

NATIONAL BRICK

The annual report of the National Brick Co., of L'Annapolis, showed an operating loss of \$88,000 for 1921 and a total deficit of some \$790,000.

CONSOLIDATED RUBBER CO.

Annual Statement Will Reflect Changed Business Conditions

From Our Own Correspondent MONTREAL.—The annual meeting of the Canadian Consolidated Rubber Company will be held at noon on April 25 in this city.

OUTPUT OF RADIO COMPANIES NOW IN BIG DEMAND

Canadian Independent Telephone Turning Out Large Quantity of Apparatus

"We have enough orders for radio sets booked at the present time to keep us operating to capacity for the next six months," said S. D. MacKay, general manager of the Canadian Independent Telephone Company.

In view of the demand in the United States for wireless goods, it had been the intention of the company to work into the production of radio apparatus gradually.

Speaking of the commercial value of the radio-telephone in the near future, Mr. MacKay said that while he believed that it may never entirely replace the ordinary telephone, it certainly would replace it in certain definite fields.

BARCELONA SHOWS HIGHER EARNINGS

Outlook of Company More Promising—Substantial Surplus After Charges

There has been a distinct improvement in the Barcelona Traction, Light and Power Company during the past year, according to a report received by A. D. Morrow and Company, Toronto.

Table with columns: Year, Gross receipts, Net receipts. Shows financial data for Barcelona Traction, Light and Power Company from 1921 to 1919.

Issues of new securities in London during first quarter placed at \$286,207,100, the largest first quarter since 1919.

Little Success Attending Effort to Sell Bridge Bonds

R. T. Scott Has Dropped the Project and Will Form Another Company—Plans of Promoters Have Not Yet Been Announced

A warning against Blue Sky legislation of the type which will give a provincial official power to put a stamp of government approval on an issue of stock to be offered to the public has been consistently sounded by THE FINANCIAL POST.

The fact that the bonds have been going slowly has evidently led to differences between A. F. Healy, president of the R. T. Scott Company and one of the chief promoters of the Bridge project, and R. T. Scott, vice-president and general manager of the company.

Mr. Healy has not announced what plans are being formulated for the handling of the Bridge securities but it is evident that it is going to be difficult to get the public to put up the necessary \$20,000,000 for the first sections of the bridge on the terms mentioned.

New York financial house and raise the balance by selling preferred stock to the public.

OTTAWA POWER CO'S GAIN IN EARNINGS

Net Earnings of \$91,000 for First Two Months up \$20,000—Over 9% on Com.

MONTREAL.—Figures of earnings of the Ottawa, Light, Heat & Power Co. for the months of January and February show very satisfactory increases gross and net earnings and also in surplus over the similar period of 1921.

Table with columns: Two Months Ended Feb. 28, 1922, 1921. Shows financial data for Ottawa Power Co. including Gross Earnings, Net Earnings, and Net Surplus.

Russell Motor Company Pass Common Dividend

The regular quarterly dividend on the preferred stock of the Russell Motor Car Company at 1% per cent. is to be paid, was the decision of the directors after a meeting held on April 17.

close of the fiscal year, July 1st next. The dividend rate on the common was formerly 7 per cent., but was later reduced to 4 per cent., when the directors, meeting on February 1 last declared a distribution of 1 per cent. for the quarter.

GORDON & WALLS 33-35 Victoria Street, Toronto

MERGER REQUIRED OF AMES HOLDEN SUBSIDIARY CO.

To Save Parent Company Tire and Felt Must Join It

\$3,500,000 WIPED OUT

Last Three Years Cleared Out Working Capital—Creditors Assisting in Re-organization

From Our Own Correspondent MONTREAL.—A plan that has been in the background of the Ames, Holden, McCready organization for the past three years or more, namely the amalgamation of the new subsidiary companies with the parent concern, that is, the Ames Holden Tire Company and the Ames Holden Felt Company, has been forced upon the directors in an effort to save the boot and shoe end of the business. The judgment of those who developed the manufacture of tires and rubber footwear and felt goods in 1919 is now being justified. Both the tire company and the felt company made money in 1921 when the parent company lost very heavily, and the pooling of these growing and successful concerns is certain to render the securing of the working capital that is now required, much more simple. The coming amalgamation of all companies was announced at a meeting of creditors this week by D. Lorne McGibbon, Chairman of the board of Ames, Holden, McCready, who has been forced to take charge of the movement for reorganization and new financing through the death of the president last week, T. H. Rieder.

Last All Working Capital In addressing the creditors Mr. McGibbon stated that the difficulties of the Ames, Holden, McCready Company could be attributed to the slump of inventory prices of commodities, which forced the company to take huge losses, and, further, to a lack of business while labor remained high and capacity was below normal. Indeed the whole character of the shoe business had changed in the past two years. Formerly the manufacturer could go to the retailer in the Spring and book their business for the Fall, and in the Fall book business for the Spring, and knowing about how much would be required they could go intelligently forward and manufacture. Since the slump in business retailers did not give orders in advance but bought month by month so that the manufacturers could not get ahead with stocks and when orders did come at the selling season found it difficult to fill them. The Company must either close or secure new capital in order to make up stock to meet the demand in the Fall for immediate delivery. He declared that three years ago the company had \$3,500,000 in working capital and that this to-day was practically wiped out. He thought, however, with proper co-operation things could be brought into good shape again. Business for January and February this year had shown an improvement over last although even in these months it was still being done at a loss. Figures for March showed a business of over \$700,000 and a profit for the first time in two years, with an outlook for an equal turnover in the months of April and May.

He promised to take \$500,000 himself if he were assured of co-operation on the part of all. This was in addition to a sum of \$650,000 that he had already invested in the general mortgage bonds at \$80. Mr. McGibbon suggested that each of the series of bondholders in the Ames-Holden-McCready; the Ames-Holden Tire Company, and the Ames-Holden Felt Company should form committees of three each, as well as the unsecured creditors, and that one from each of these committees should form a general committee to work out plans for securing new capital. If the Company went into liquidation there would be sufficient security for the first mortgage bondholders and the banks would be covered by the merchandise and accounts receivable, but all others including the second mortgage bondholders and creditors would secure very little.

The following committee was appointed by the creditors to act for them: T. deG. Stewart of the Anglo-Canadian Leather Co., J. R. Payan of Duclos and Payan, and Elmer Davis of A. Davis and Sons of Kingston.

The Two Subsidiaries

The Ames Holden Tire Company, which was incorporated in May, 1919, as a subsidiary of Ames Holden-McCready, has \$1,000,000 of bonds outstanding, a 7 per cent. twenty-year, first mortgage issue, due July 1, 1939. The interest on this has been met out of the earnings of the Company. In addition there is capital stock of \$3,000,000 of which \$2,000,000 has been issued.

The Ames Holden Felt Company was organized in September, 1919,

with \$375,000 in bonds similar to those of Ames Holden Tire Company. There was \$500,000 of stock issued.

General Electric to Build Vacuum Tubes

The Canadian General Electric has undertaken the construction of vacuum tubes for use in wireless instruments. The supply has been limited in view of the immense demand for this very necessary part of radio equipment, and a heavy investment has been made for the manufacture of these tubes. At the present time the output is approximately 200-300 per week, but with the installation of more equipment this output will be brought up to 200 per day. The bulbs or tubes so far produced have been what are known as the U. V. 200 and the U. V. 201, the former tube for the detection of wireless signals and the latter for detection amplification.

KING EDWARD HOTEL MAKES GOOD SHOWING

Company is Able to Add to Surplus \$16,540 in Spite of Difficult Year

In view of the fact that the year 1921 could not be considered a good business year, the fact that the profits of the King Edward Hotel Company, after all charges for depreciation, wages and dividend charges, amounted to \$289,005 as against \$284,790 for 1920, is very satisfactory. The company was able to earn dividends of 10 per cent. and to add to the surplus account the sum of \$16,540. The profit and loss account for the past two years is as follows:

Table with 2 columns: Year (1921, 1920) and various financial metrics like Operating Profit, Less Interest, Less Depreciation, Less Income Tax, Less Dividends, Surplus, Surplus Forward.

Frank A. Dudley, president of the company, commenting on the year's report reminded the shareholders that the property of the King Edward Construction Company was taken into operation under lease about September 15th, which involved an increase in operation expense, as well as a rental for the building for the most unproductive months of the year. The balance sheet reflected the acquisition of 8,500 shares of the King Edward construction Company, and a special refund was made for the purpose of keeping this item separate from surplus account. Fixed inventories were increased by \$409,215; this sum was used principally for the furnishing of the new wing. It was obtained partially through a loan of \$230,000 and from accumulated cash reserve.

DIVIDEND OUTLOOK OF MINING CORPORATION

President Sees No Hope of Early Resumption of Dividends

At an informal meeting of the London shareholders of the Mining Corporation of Canada, Limited, J. P. Watson, president of the corporation, was not unduly optimistic in his remarks. He was unable to state when the payment of dividends would be resumed and intimated that there was no likelihood of any being paid this year.

With regard to the old Cobalt properties he stated that the production for last year would approximate 1,250,000 ozs. of silver. On that property they were approaching exhaustion and of the total production of 1,250,000 ozs. 600,000 ozs. came out of the recently acquired Buffalo property. The difference between the price obtained for their silver last year and the price paid in 1919 was approximately 70 cents per oz. That difference would have paid a dividend on the shares of over 10 per cent. and that the fall in value was the reason why dividends had not been paid. They would have a small profit on the year's operations notwithstanding the fact that they had been closed down for three months of the past year.

After referring to the impossibility of obtaining information of their properties in Russia, until political stability had been regained he proceeded to deal with the Flin Flon property in Manitoba. In connection with that property he said that they had originally joined in with a syndicate in New York, taking an option on the entire property. Owing to financial conditions though, that syndicate had been unable to continue and the corporation had purchased a large controlling interest in the property.

KIPPEN & CO. ORGANIZED

From Our Own Correspondent MONTREAL.—A new investment house has been organized here, Kippen & Co., which will specialize in high grade bonds and unlisted securities. The members are J. D. Kippen who has had a long experience in financial affairs and Eric D. B. Kippen who also brings valuable experience to the service of the firm.

PAPER COMPANIES TIMBER LIMITS ARE A BIG ASSET

A Point to Which Investors Should Give Their Attention

THE EXPORT OUTLOOK

Scarcity of Pulpwood Areas in Eastern States a Big Factor in Situation Affecting Canada

By ROBSON BLACK
 Manager, Canadian Forestry Association
 A factor of considerable magnitude which is very seldom considered by the general public in estimating the assets behind Canadian pulp and paper companies is the rapid and inevitable increase in value of the timber limits on which most of our companies hold what are practically self-perpetuating leases. The claim is seldom made, and yet might be made with a show of reason, that the valuation placed upon timber limits in the balance sheet of Canadian wood-using industries even three or five years ago is substantially under the present market price of the limits. In its wide-spread educational campaign to bring about a sane public appreciation of the enormous national and economical advantages identified with the possession of productive forest areas the point has been continually stressed by the Canadian Forestry Association, that the remaining timber stands of the Dominion constitute Canada's most powerful industrial magnet and the only assurance of new population in areas which would otherwise be wilderness. That the average Canadian has not yet realized the bearing of the Canadian forest upon the future growth of the country is well illustrated by the annual plague of forest fires which in Ontario and Quebec alone ran up to 3,000 conflagration in 1921 with a total loss of probably \$15,000,000.

The Export Outlook
 The timber supply situation in Canada is best estimated by examining United States conditions for while Canada possesses abundance of timber to supply her own population indefinitely, the fact cannot be overlooked that it is the export trade to the United States that keeps alive probably nine-tenths of all the wood-using industries in the Dominion. In normal times only about ten to fifteen per cent of the paper production of Canadian mills is used in the Dominion and not more than one-sixth of the total lumber cut of Canada is consumed within this country.

The growth of the pulp and paper industry in Canada has been prematurely forced by the relative scarcity of pulpwood areas in the Eastern States and the recognition on the part of American corporations and investors that the passing of time was certain to increase the handicap of the American newsprint manufacturer. Efforts at reforestation are yet in the swaddling clothes stage and even allowing for vigorous reforestation efforts during the next five or ten years the wood crops resulting therefrom cannot prove of use to the American industry for at least fifty to sixty years. Meantime the newspaper press of the United States must have raw materials for about thirty million newspapers every day. If the paper mills of the Eastern States have, as is plain, less than ten years, wood supply, the deduction follows that paper making will continue to shift its centre of gravity north of the Canadian border.

The war time census of wood supplies in the State of New York, maintains that less than ten million cords of spruce remained in that region and that as the annual cut in New York State is about 500,000 cords, seven-teen years at the present rate of consumption will exterminate spruce as a commercial factor. For the whole of the New England state, where the American newsprint industry is now concentrated, the most liberal estimates do not give the industry a life of more than eighteen years and long before the termination of that period the complete domination of Canadian paper mills over the American market will have made itself felt.

Fire Prevention is Vital
 As the pulp and lumber supplies of the great consuming market south of the Canadian border display a more and more drastic depletion the strategic position of Canada's forest should warrant the Canadian people in insisting that the protection of such valuable national property from the present inroad of forest fires should be raised into the front rank of public issues.

ABITIBI POWER & PAPER
 Abitibi Power and Paper Company is building its own railway for the transportation of raw material from Iroquois Falls to a point about twelve miles north. This will link the Iroquois Falls branch of the T. and N.O. Railway up with the village of Hughes on the main line of the National Transcontinental. The railway will pass through the townships of Edward, Mortimer and part of Stinson.

HELPING CANADA'S EXPORTS

That the announced policy of General Motors Corporation to manufacture and ship the bulk of their export business from Canada is already bearing fruit, is evident from a statement by Canadian National Railways that the road would handle out of Oshawa, this week a special freight train of fifty-five carloads of automobiles, destined for British trade.

DETROIT RAILWAY EARNINGS IMPROVE

Figures for March Run Well Ahead of 1921—In First Quarter Net More Than Doubled

From Our Own Correspondent
MONTREAL—A commendable change has been brought about in connection with Detroit United Railway under the new control in the decision to publish monthly the returns of earnings. Ordinarily this was not available except in the form of the annual report. The operating revenue still reflects the condition of business in showing a reduction from the figures for March, 1921, of \$2,084,196 to \$1,758,129. On the other hand, the cutting down of expenditure is reflected in a reduction in operating expenses from \$1,666,127 to \$1,299,108. Added to the net operating revenue was non-operating revenue of \$144,681 as against \$77,363 in March, 1921, giving a gross income of \$510,102 and a net income of \$343,660, an increase of \$232,000 for the month.

Taking the figures for the first three months of the year, the net income compares at \$628,688 with a net of \$274,118 for the first quarter of 1921. Working these figures out in terms of dividends it is seen that for the first quarter of this year over 26 per cent was earned as compared with 7.13 per cent for 1921, while for the month of March the earnings available for dividends were 26.82 per cent as compared with 8.71 per cent in March 1921. The figures for the month and three-month periods, compare as follows:

	1922	1921
March—		
Oper. rev.	\$1,758,129	\$2,084,196
Net oper. rev.	1,299,108	1,666,127
Non-oper. rev.	365,420	211,968
Gross income	1,444,811	1,778,383
Net income	510,102	289,332
Three months—		
Oper. rev.	\$4,990,099	\$5,917,675
Net oper. rev.	4,027,933	4,907,511
Non-oper. rev.	681,216	631,898
Gross income	4,497,758	5,539,409
Net income	1,311,075	804,409

WEST KOOTENAY POWER CO. GAINING

Improvement in Last Year's Report—Extension of 30 Miles—Delivering 28,000 h.p.

From Our Own Correspondent
MONTREAL—The annual statement of the West Kootenay Power and Light Company for the year 1921, shows earnings almost as high as those for the sixteen months preceding. The total earnings for the past year were \$791,007, where the sixteen months' earnings had been \$821,389. After expenses, bond interest, depreciation, and sinking fund had been provided for there remained the balance available for dividends of \$139,021 as against \$51,567 for the sixteen months. Once again, however, the company was forced to draw upon its surplus to cover dividend payments of \$286,710 so that the net result for the year was a deficit of \$147,689, which reduced the balance carried forward into 1921 of \$179,717 to \$32,028 as the present balance. Two years ago the balance had been \$479,290 but this had been depleted at the end of 1920 by \$299,573 which was the deficit after paying dividends for the year 1920.

The company reports an encouraging increase, however, in the revenue producing load which increased from 23,711 h. p. in 1920 to 28,065 h. p. in 1921. The report of the general manager, L. A. Campbell, states that the irrigation project referred to in the report of 1920 had been started and financed by the Government of British Columbia during 1921 and it was the intention to have water on approximately 2,000 acres by May, 1922. He states that he is led to believe that it is the intention to extend the irrigation district from time to time, and when taking into consideration that there is an approximate acreage of 8,000 acres which can be brought under water to advantage, I would say that eventually the Grand Forks Valley, through irrigation, will be able to produce a very large tonnage of produce, and therefore not only will our revenue be increased for the power required for the pumping of water for this irrigation project, but also will improve through the increased prosperity which will be brought about in the City of Grand Forks.

He refers to plans of the company to erect 30 miles of a transmission line from Penticton to Kelowna, where power will be required for the lighting of the town and district, with business coming also from intermediate points.

The Report for 1921

of The Great-West Life Assurance Company is now in print, and will be mailed to any interested person on request.

It records a year of remarkable success—success founded upon twenty-nine years of remarkable

COMPANY'S POSITION

General Manager McLimont
Says That the Cost of His
System Would be Above
\$15,000,000

From Our Own Correspondent

WINNIPEG.—With the City Council's yielding to a committee of the Winnipeg Railway Company's application for franchise extension from 1927 to 1937, the proposal is once more the football of civic politics, which appears to preclude the possibility of the company embarking immediately upon its programme of extensions and betterments. Vice-president McLimont has said that only upon the city's speedy affirmation of its request would it be possible to carry out the utility's plans for 1922. A tardy civic decision will postpone for at least 12 months the company's broadening out, and, automatically will halt the company's contemplated financing.

The attitude of a very considerable proportion of Winnipeg ratepayers is reflected in the demand of the two city newspapers that the public must first be consulted before the city commits itself to a franchise extension. "The public and not the aldermen have the final say as to whether extension will be granted or not," declares the Tribune, adding, "Winnipeg is deeply committed to the principle of public ownership of public utilities. Its experience has so far been encouraging and as to the bent and set of the public mind there can be no doubt whatever."

Alderman Fowler, chairman of the committee who will deal with the company's application for the city council has voiced his opposition, giving as his main reasons that the citizens could not continue to pay the heavy costs of financing the street railway; that the method of financing adopted by the company was excessively expensive; that in connection with the recent sale of preference stock the company gave away a large amount of common stock as a bonus and sold the preference stock at a discount; that the cost of financing fell on the car riders and that the car riders were expected to provide a return upon the capital stock of the company.

A Question of Value

Mr. McLimont for the company says it would cost Winnipeg upwards of \$15,000,000 to acquire the street railway property. Setting that figure against the assumption of Alderman Fowler that \$9,000,000 would suffice, Mr. McLimont points out that even the \$15,000,000 which he estimates as the approximate cost, does not take into account the requirements of the community in respect to extensions, improvements, etc., which, by 1927, would total at least another \$3,000,000 and possibly more, depending upon the growth of the city.

Referring to Alderman Fowler's statement that the city could take over the railway and without raising fares, pay for it out of the earnings in 30 years, Mr. McLimont says:

"Such an erroneous impression should not go abroad without correction. Alderman Fowler's statement assumes that the obligation of the city in taking over the street railway, would be \$9,000,000, as a matter of fact when the bankers were investigating the property recently the engineers found that before the city could take over the utility and put itself into a position to operate successfully, the cost to the city would be upwards of \$15,000,000.

"The valuation placed by the Public Utilities commissioner upon the property on June 30, 1920, was \$9,200,000. To this must be added capital additions made since, bringing the total up to \$10,500,000 (this is upon the assumption that the company would be willing to adopt for sale purposes, the valuation of the public utilities commission.)

"In addition there also would be upon the city the cost of providing and re-arranging power for railway purposes, and the expense of separating the railway property from the company's electric light and power system, and for arranging all of the electrical distribution which the operation of the railway system by the city would require.

"Still further there would be the expenditure for extensions and improvements—in fact it will readily be seen that a vast amount of the work involved in the present negotiations, which the city is now asking us to do, would fall upon the city to do; and the extension and betterments which beyond question would be required by 1927, would cost at least another \$3,000,000, and possibly very much more, depending upon the growth of the city.

"Alderman Fowler in his statement claimed that the city could take over the property without raising the fares and without it costing the citizens of Winnipeg one cent, and, from earnings, pay back the money that was required to be borrowed together with interest, in 30 years. This cannot be done, for if the city were to undertake to take over the property and provide interest and a sinking fund to retire the principal there would be a large annual deficit."

INTERNATIONAL PAPER

Net Loss After All Charges Amount-
ed To \$7,442,890

International Paper Company's annual report for the year ending December 31st, 1921, shows a net income loss of \$7,442,890 after charges, depreciation and inventory adjustment. This compares with net income of \$12,055,902 or the equivalent after preferred dividends to \$53.17 a share earned on the \$19,850,264 outstanding on the common stock in the previous year.

The consolidated income and profit and loss account for the year ending 1921, compares as follows:

	1921	1920
Total rev.	\$1,542,642	\$21,936,236
Depreciation	2,379,967	2,267,718

LEVIATHAN COVERAGE TO BE PLACED ABROAD

State Nicknames Discarded by
Shipping Board—Leviathan
Now Abraham Lincoln

The Leviathan, formerly the Vaterland, will sail from New York in the near future, to Newport News, where she will be reconditioned as one of the finest liners afloat and again will change her name to the Abraham Lincoln.

The Shipping Board will be forced to place the greater part of the marine insurance on the Leviathan with foreign insurance companies. While the insurance, covering the voyage of the 900-foot liner from New York to Newport News and the builders risk policy, have not been awarded, it has developed that the facilities in the American market to protect the great liner are not sufficiently broad and the greater part of the insurance will have to be referred to their foreign market.

It was recognized at the outset that the Shipping Board would have to go into the foreign market. William J. Love, vice-president of the Emergency Fleet Corporation, said to-day. He added that the insurance had not yet been placed however. The Leviathan will be insured for about \$5,000,000 when she is moved from New York to the yard of the Newport News Dry Dock & Shipbuilding Company. A policy of about \$6,000,000 will be taken out to cover the builders' risk, he stated.

The Leviathan will be at the Virginia ship yard for about one year.

In making estimates for the Leviathan's reconditioning costs, the sum of \$1,502,697 was set aside to pay the expenses of insurance, the trial trip dry docking maintenance and inspection, the policy will be the largest ever written for the Shipping Board on one ship. When the Leviathan is commissioned, it has been estimated that marine insurance alone will cost \$12,623 a round voyage.

DETROIT BUYS STREET RAILWAY SYSTEM

Will Pay \$19,850,000 for 270
Miles—Company Still Has
600 Miles Outside

From Our Own Correspondent

MONTREAL.—A certain amount of relief greeted the result of the vote in Detroit on Monday by which the ratepayers by 4 to 1 agreed to purchase the City lines of the Detroit United Railway for a sum of \$19,850,000. This marked the end of a bitter fight that had been going on for years between the Company's officials and City Council, much in the manner of the Toronto Railway Company. Of the purchase price the sum of \$4,000,000 is to be paid at once, and the remainder the Mayor expects to meet out of earnings during the next eleven years. Taking the small section which was secured by the City from the Company last year the total mileage given up by Detroit United amounts to about 300 miles. This leaves 600 miles of radial lines running into Detroit but not operating within the city limits for local traffic. These outside lines are believed to have an increasingly valuable franchise. Detroit City itself will now have the largest municipal railway in the world, about 476 miles of trackage.

The last vote for taking over the street railway system was based on a proposal of a price of \$31,000,000 which was defeated. The present price falls considerably below this, but it is estimated that between \$4,000,000 and \$5,000,000 should be added to the \$20,000,000 odd to cover the previous purchase and the value of properties that were included in the former proposal but still remain in the company's possession. The result of the vote served to strengthen the company's securities two or three points, but little real interest developed.

N. S. TRAMWAYS ON GOOD TERMS WITH PROVINCE

Satisfactory Understanding
Re. Distribution of
Power

EARNINGS IMPROVED

Decline in Fuel and Labor Costs
an Important Factor in This
Connection—New Issue of
Bonds is Ratified

From Our Own Correspondent

HALIFAX.—A very considerable improvement in the affairs of the Nova Scotia Tramways and Power Company is indicated by the report submitted to the recent annual meeting of the shareholders. Net earnings for the year ending December 31, 1921, amounted to \$181,638, against \$87,529 for 1920. The company's earnings have shown consistent improvement since September, 1921. For quarter ending March 31, 1922, net earnings, after providing for operation, maintenance and taxes, amounted to \$85,756, compared with \$54,120 for the first three months of 1921. If the company's earnings continue for the balance of the year at the same rate as for the first three months, the net returns, after meeting taxes, etc., would be in excess of \$300,000 for 1922.

This much improved showing is ascribed to economies in operation expenses, due to the decline in fuel and labor costs. The annual meeting ratified an agreement for the issue and sale of \$1,250,000 par value of 7% general mortgage bonds series "A," proceeds of which will be used to fund on June 1, the company's maturing issue of 7% coupon notes.

Deal with Government

In the president's report it is pointed out that the company's relations with the City of Halifax have materially improved during the year, and that the company has entered into a contract with the Nova Scotia Power Commission for the distribution of the power produced by the Hydro-electric development at Saint

Margaret's Bay. As the amount of power available there is about equal to the company's present capacity of steam generated power, the effect of this contract will be to enable the company to supply its present load with hydro-electric current, utilizing its steam equipment as a standby or to meet increases in business. This will enable the company to increase its business without additional capital investment.

The Board of Public Utility is having a valuation of the company's properties made by independent experts for rate fixing purposes. The Nova Scotia Public Utility Act permits public utility companies to earn 8% on a fair valuation of property, subject to certain deductions for reserve and amortization, etc.

A MINING MERGER

The Hunton-Kirkland Consolidated Is
The Result

In a statement issued by the shareholders of the Hunton-Kirkland Gold Mines, Limited, a proposition has been made to the shareholders of the Hunton-Kirkland, by the Minnaker-Kirkland Gold Mining Company for the consolidation of the two properties.

A new company is to be formed with an authorized capital of \$4,000,000 made up of 4,000,000 shares, with a par value of \$1 each, to be called the Hunton-Kirkland Consolidated Gold Mines, Limited.

The Hunton and Minnaker properties to be transferred to the new company on the basis of 1,000,000 shares each with no priority one over the other. The directorate is to consist of 11 directors and each company is to pay their respective liabilities and go into the new company free of liabilities. Stock to be issued by the Hunton and Minnaker properties on a basis of two shares in the new company for three shares in the old companies.

LONDON BRIDGE CO.

The London Bridge Company, a subsidiary company of the Structural Steel Company of Welland, has been organized with a capital stock of \$100,000. Three acres of land has been purchased in East London, and a plant will be equipped as soon as possible.

MONEY BANKING AND EXCHANGE

CANADIAN BANKS ARE CURTAILING ACTIVITIES ABROAD

Bank of Montreal Sells Merchants Property in New York

Apparently determined to consolidate their domestic position Canadian bankers are less and less disposed at the present juncture toward international aggressions.

Since commencement of the year there have been at least three important developments, affecting the New York status of Canadian bankers. Firstly, the Royal Bank of Canada disposed of its shares in the Bank of Manhattan Company, then through the amalgamation of the Park-Union Foreign Banking Corporation of New York, the Union Bank of Canada automatically withdrew its controlling interests and now what was once regarded as the fourth Canadian bank property in Wall Street has again passed into American hands.

A declining Canadian banking interest in New York is a reflection of world banking, and the determination of all bankers who have carried their operations into the foreign field to withdraw as much as possible for the further strengthening of their home ties.

Presumably the Bank of Montreal sold 38 Wall Street for the reason that it had no need for the property. The Bank of Montreal is always well entrenched in its own splendid quarters, farther down the street but equally as advantageously located from the viewpoint of general banking.

Coming at this time the Bank of Montreal's disposal of the property attracts probably more attention because of the banking happenings in New York which preceded the move. It was announced only a few weeks ago that Speyer & Co. had bought from the Royal Bank of Canada its entire holdings about 8,000 shares of the stock of the Bank of Manhattan Co. which the Royal Bank of Canada had received early in 1920 in exchange for its holdings of Merchants National Bank stock.

The Royal Bank has given no specific reason for its withdrawal from what had been regarded as a highly interesting, if not significant investment. The Royal became the controlling interest in the Merchants National Bank of New York early in January, 1919, a fact that became known with the election of Raymond E. Jones to the presidency. Mr. Jones originally went to New York from Canada as agent of the Royal. He entered the Merchants National Bank as vice-president when the Royal Bank in June 1917 paid \$2,860,000 for one share more than half the capital stock of the New York institution.

Despite its purchase the Merchants National Bank of course remained an American institution; the Canadian Bank simply acquired the majority stock. Foreign banks with agencies in New York are not permitted to accept domestic deposits but acquisition of a New York state banking institution however was regarded as a means for giving the foreign bank the indirect

right to take deposits and for this reason it was expected among Wall Street bankers that the Canadian bank would continue its interest. Because, the Merchants National lost its identity in the Bank of Manhattan Company, and, presumably with a lessened interest in the larger enterprise, the Royal Bank no longer felt the urge to retain its stock interests.

Park-Union Foreign Banking Corporation recently merged its international banking interests with the Asia Banking Corporation was controlled jointly by the National Park Bank of New York and the Union Bank of Canada. It is presumed that the consolidation left the original owners free to withdraw. While the Park Union Foreign Banking Corporation was the fourth of the foreign trade banks to lose their separate identity in the international banking field it is interesting to find that the original foreign trade bank, the American Foreign Banking Corporation, continues to carry on. This corporation was started by two Canadian trained bankers, Archibald Kains and T. F. Aspden, and among the original stockholders was the Standard Bank of Canada. Owing to the exigencies of foreign trade financing the subscribing banks lately were called upon to add to the Corporation's surplus reserve.

ANOTHER SAVINGS OFFICE One of the branches of the Ontario Government Savings will be located at Pembroke. A site has been secured for the building. There are four chartered bank branches located in Pembroke.

A \$25 BILL The jubilee anniversary of the Bank of Hamilton, has been fittingly celebrated by the management by an issue of new notes, a feature of which is a \$25 note, similar to the five pound note of the Bank of England. The Bank of Hamilton is said to be the first Canadian bank to issue a note of this denomination.

UNION W. M. Chandler, who some time past has been directing the affairs of the Union Bank in Alberta from Winnipeg, is being transferred to Calgary and appointed superintendent of Alberta branches. Mr. Chandler will have as his assistant A. F. S. Tatum, who has had a wide experience in Alberta as manager of several of the branches and later as inspector.

WEYBURN SECURITY At the annual meeting of the Weyburn Security Bank the board of directors was re-elected with the exception of F. B. Moffet, who announced that he would be unable to act as director another year so much of the time that he could not do justice to the position. M. A. Miller, of the law firm of Morphy & Miller, was elected to fill the vacancy.

STERLING STEADY THROUGHOUT WEEK AVERAGING \$4.41

Exchange Markets Watching Course of Events at Genoa Closely

With the opening of the Genoa Conference the exchange markets improved somewhat, the general attitude being that the exchange rates were following the developments there very closely. On the whole the rates were firm and the market quiet. London and the continental exchanges were closed in observance of the Easter holidays. Sterling was fairly steady throughout the week at about \$4.41 1/2, which is just under the high point of its recovery.

The financial interest in the outcome of the Genoa Conference is very keen in New York. Particular attention is being given during the past few days to the proposal made for a general conference of issuing banks. On the whole the bankers appear to receive the proposal favourably, but are withholding active support until the very mixed-up conditions at the Conference are cleared up. Of the other continental exchange rates the franc enjoyed the greatest advance, when it was carried to the highest figure since December 27, 1919; lire was the next in line and advanced to the highest point since May 1921. In the latter end of the week these rates eased off somewhat. Exchange on Berlin was firm throughout the week at approximately thirty-four hundredths of a cent. There was not much change in Canadian funds during the week, the flotation of the \$15,000,000 loan had a strengthening effect on the market. The holidays also decreased the activity in funds.

ALBERTA SUPERINTENDENT New Office Created by the Union Bank of Canada

In keeping with the development of banking in the Province of Alberta, the Union Bank of Canada has decided to create at Calgary, a superintendent's department, having under its direction the 67 branches of the bank in the province. W. M. Chandler, who for some years past has directed the affairs of the bank in Alberta, from Winnipeg, is being transferred to Calgary and is appointed supervisor of the Alberta branches. He will have as his assistant A. F. S. Tatum, who has had wide experience as manager of several branches of the bank throughout the province and latterly an inspector.

30,000 Islands—Georgian Bay

It is impossible to describe this wonderful waterway with any degree of satisfaction, Nature having been so generous in beautifying and adorning it and having dowered it with so many gorgeous scenic effects, including rugged promontories, intricate channels and narrows, and vast amphitheatres of open water. This entire district is so full of interest and altogether so charming that to go there once is to want to return and take your friends. The air is dry and bracing, and a sure cure for hay fever. There is no end of good fishing—deep fishing for big fish and fly fishing for black bass. And for those who do not care to fish, there is motor-boating, a row or sail, bathing and dancing, lawn tennis and other pastimes. And always there is the wildwood that welcomes, rejuvenates and sends the visitor home with happy memories. The principal gateway is Midland, 101 miles north of Toronto and reached by the Grand Trunk. Free copy of interesting publication with map and list of hotels sent for the asking. Write to any Grand Trunk Agent or C. E. Hornung, D.P.A., Toronto, Ont.

London Statist puts Russian foreign trade last year at 270,000,000 rubles (on pre-war basis) or one-tenth of 1913. Exports amounted to 20,000,000.

Let Us Quit This Sentimental Twaddle!

Canadian employers have been bitterly scored, time and again, for crimes of which they have not been guilty, says Dr. C. K. Clarke in his article entitled

"Occupational Wanderers"

which appears in the April 15 MACLEAN'S. In this article Dr. Clarke shatters one myth about the average factory girl. Many so-called reformers have insisted that factory conditions and low wages are at the bottom of the economic and moral catastrophes which wreak havoc with certain types of working girls, and a great deal of sentimental twaddle has been talked about conditions which are purely imaginary.

After a long study of the question Dr. Clarke has come to the conclusion that "the majority of the misfits are earning far more than they are worth," and "the best of Canadian factories are an inspiration and it is doubtful if either psychiatry or psychology can contribute much in making suggestions of value." Many boys and girls, men and women, who are not overly bright mentally, are enabled by proper care to overcome their handicap and find a niche which enables them to play a useful role in factory life.

Dr. Clarke brings out some startling facts in this article, which will be of interest to every employer of labor in Canada, as well as to all thinking men and women who are interested in the welfare of working men and working girls.

NEWS AND VIEWS FOR MANAGER

ADJUST BANK ACT TO SUIT CURRENT TRADE SITUATION

Bank Manager Gives Outline of the Canadian System

Following is an address on the Canadian banking system delivered before the junior section of the Windsor Chamber of Commerce by W. N. McKay, manager of the Bank of Hamilton in that city. In view of the Merchants Bank affair, the agitation for government banks and vague complaints against the Bank Act, branch managers can do valuable work in the interests of business and banking at this time in giving the public a better understanding of the Canadian system particularly in view of the periodical consideration of the Bank Act by parliament next year.—J.W.T.

In every walk of life a man requires a certain amount of scientific training and the world recognises the need and practical value of science. In finance the same need exists but is not generally acknowledged; as a matter of fact the science of money and credit is one of the most difficult in the whole field of economics and the business or profession of banking, which is founded upon that science, and should be conducted in accordance with its principles, is one demanding the keenest and clearest brain.

Industry furnishes the red blood of the economic organism; trade and commerce are its circulatory system; finance is its nervous system. Every person who desires a thoroughgoing knowledge of business should study money, currency and banking. Every fluctuation of price affects the welfare of every person who buys and sells and the ability to foresee these fluctuations enables the business man to avoid loss and gain profits.

The science of money and banking deals with prices and attempts to explain their fluctuations so far as the cause of these fluctuations is due to changes in the conditions of currency and banking.

Some Banking History

First of all a few words as to the development of money as a medium of exchange. In the Bible we read of a man's wealth being estimated in flocks and herds, gold and silver, then we read of the first exchange of goods for goods, or direct barter; this was not always convenient as you may well imagine, so that something was looked for as a medium of exchange. The first articles used as money in any definite form were ornamental stones or shells; in America the first form of ornamental money was wampum, which consisted of strings of beads cut from shells, black and white, the black being worth double the white, and was at one time legal tender in the Colonies up to \$10, some clever but unscrupulous Europeans put this into disuse by dyeing the white bead black and thus doubling their value.

The next form was beaver skins, rice and tobacco, but owing to their instability of value they were discarded; in recent years I remember a widow who kept a small store in an Ontario town who never gave any cents or coppers in change but insisted on giving out nutmegs, one for a copper.

Bank gets its name from the Italian word "banco," meaning a bench used by the money dealers and we still do business over the counter or bench. Although banking operations on a considerable scale were carried on by the ancients, it was about the year 1171 that the earliest public bank, that of Venice, was established, continuing for 600 years. It was a bank of deposit only and in its earliest periods deposits could not be withdrawn but you could transfer from one name to another. We have advanced since then and are now so civilized that we let you withdraw your money and in some instances, very rare though, actually let you over-draw.

The Canadian System

The Bank of England was established in 1694, the Bank of France in 1800, although the first attempt to establish a central bank of issue in 1817 the Bank of Montreal was established in Lower Canada and in France was John Law's ill-fated scheme in 1716. In the United States the first bank established was the Bank of North America in Philadelphia in 1781, and in 1784, the Bank of New York was established by Alexander Hamilton, and in 1791, the First Bank of the United States was chartered by Congress, while Alex Hamilton was Sec. of the Treasury.

In Canada in 1817 and 1818 private banking corporations were established and in 1818 the Quebec Bank, the Bank of Canada at Montreal and the Bank of Upper Canada at Kingston.

These were followed by other banks in later years until we now have nearly 5,000 branches, all over Canada, even up to the oil fields at Fort Norman, with a total paid up capital of \$129,316,975, a reserve fund

of \$135,223,499 and total assets of \$2,824,130,507, a remarkable showing for a young country with a population of less than nine millions.

Criticism is Heard

Now as to Canadian banking system, you will hear a lot of criticism particularly at the present time; we have one of the best systems in the world, but no system is perfect and even a perfect system has to depend upon the human element, so that it is not the fault of the system, but the application of it. There are four features of the Canadian banking system that stand out distinctly and I would like to mention them briefly.

The first is our branch system; this is to some extent copied from the system in use in Scotland and England but it is also copied from the original idea of Alex Hamilton, who saw years ago that a banking system, in order to serve the whole country, must gather in and distribute capital all over the country and do this in an easy and effective manner. This causes our system to be an arm of the State, helpful to the State, and a source of power to the country as a whole as opposed to a system of small banks scattered over the country and although useful in each community, yet not powerful in working for the country as a whole. It is no doubt nice to be able to go into a bank and call the director by his first name and get a loan from him, but our system (although a great many, particularly those from the United States, think the local bank is the proper idea) is the best, for it distributes capital easily all over the country.

PROVINCIAL BANKS BENEFIT ONE CLASS

Criticism of P. B. Bell, General Manager of Bank of Hamilton, at Annual Meeting

On the ground that they were calculated to benefit but one class, whereas there was a strong probability that the community as a whole would have to meet any losses incurred by such a venture, provincial banking ventures were criticised by J. P. Bell, general manager of the Bank of Hamilton, at the fiftieth annual meeting of that institution this week. Nor could Mr. Bell approve of Government banks paying a higher rate of interest than chartered banks pay. If the chartered banks were obliged to pay a higher rate, they would have to demand higher rates of discount from their customers.

Both Mr. Bell and Sir John Hendrie, president, criticized the treatment that banks and capital received from the Government as regards excessive taxation. They held that when capital and incomes are taxed to such a degree that it amounts to confiscation, then such methods are a menace to the general welfare, discourage enterprise by depriving men of means of surplus wealth available for investment, and, lastly, retard the expansion of industry, prolong stagnation and contribute nothing to the solution of unemployment.

EARNING HIS PAY

The story is told that a perspiring copy writer working on an Ivory soap campaign produced this:

The alkaline elements and vegetable fats in this product are blended in such a way as to secure the highest quality of saponification along with a specific gravity that keeps it on top of the water, relieving the bather of the trouble and annoyance of fishing around for it in the bottom during his ablutions.

When this piece of copy reached the advertising manager, he substituted for it these two words, "it floats."

For which of these pieces of copy would you be willing to pay the most money?—Forbes Magazine.

Margin of Credit Like Miner's Fuse

By A. B. BARKER, Manager, Toronto Clearing House.

For the bank the value of a security depends on the bank's title—whether it will hold against other creditors and on the price the security would bring at a forced sale. This latter depends largely on the amount to be sold. With a small amount the chances are there will be a fair price obtained, but if the amount be large a quick sale will usually mean that it can be made only at a sacrifice. This applies to goods as well as to stock exchange securities. If one wants to sell 100 shares of any stock there will be little trouble, but if there are several thousand shares it might break the market to try to sell them in a hurry, even when as they say the market is strong.

The same thing applies to realizing on goods pledged under Sec. 88, the larger the stock to be disposed of the less as a rule will be the percentage realized. Also when a big plant gets into difficulties it is well known that the bigger plant and equipment, the less the salvage. This can be very clearly seen in the case of a mine. When a mine is running with a three drill compressor this can be easily taken out and sold, but if the plant runs to a 40 drill compressor there will be no salvage, as it

BANKS TAKE LESS RISK IN PERIOD OF HARD TIMES

Money is Not so Free and Better Security Can be Demanded

At the annual meeting of the Weyburn Security Bank, the stockholders, who are mostly men who understand the West and do not permit slow times to stampede them, expressed great satisfaction with the general condition of the institution, particularly as regards savings deposits which it is considered have held remarkably well under the circumstances.

Questions were asked as to just how the bank was audited and this point was gone into detail by H. O. Powell, the general manager and the credit manager, Mr. See. The bank has always employed a highly responsible firm of auditors and has encouraged them to dig into things as much as they cared to. A large percentage of the securities are examined each year and the credit files gone over carefully by the auditors.

Mr. Powell, points out that during the hard times a bank does not get poor paper and the percentage of security taken is much higher than when nearly everyone's paper is considered good. If a bank was in good shape before the hard times started therefore he argues there is not much danger of its getting into trouble during the hard times. During a boom a customer would come to the bank and say he wanted \$1,000 or some other amount and if the banker commenced to ask a few questions as to security or when payments could be made or try a little sound advice he met with the answer, "If you don't want to loan the money just say so for I can get it somewhere else," and generally this was true whether the man was entitled to the money or not. At the present time a customer comes to the bank and immediately begins to explain what his position is, how he expects to pay back the money and is willing to be talked to and rather encourages a little sound business instruction.

SIX NEW BRANCHES OPENED IN MARCH

Thirteen Bank Offices Were Closed During the Month

During the month of March the Canadian chartered banks opened six new branches and closed thirteen. The Nationale, Nova Scotia and Royal opened two branches each. The Nova Scotia closed five branches, Royal three, and Dominion, Hochelaga, Imperial, Nationale and Union one each. Following is a list of the branches opened and closed:

Opened
Nationale—Ste. Flavie, Que.; Pike River, Que.
Nova Scotia—Nanaimo, B.C.; Cuatro Caminos, Havana, Cuba.
Royal—Ranchuelo, Cuba; Havana, Belastoain Street.

Closed
Dominion—Yorkton.
Hochelaga—St. Malachie, Que.
Imperial—Edmonton, 124th Street.
Nationale—Stanbridge East, Que.
Nova Scotia—Arndale, N.S.; Mace's Bay, N.B.; Dupont & Clinton Streets, Toronto; Little Bras d'Or, N.S.; Salisbury, N.S.
Royal—Notre Dame de Charny, Que.; Stalwart, Sask.; Grayson, Sask.
Union—Calgary, Stock Yards.

For the first three months of the year the new branches opened totalled twenty-one, while the number of branches closed during that period amounted to thirty-eight.

BANKER ARGUES THAT WEST WILL HAVE FAT YEAR

(Continued from Page 1)
tensive operations for commercial or industrial purposes where capital is expected to show a return on a business basis; people are building homes for themselves because of the housing shortage and high rents prevailing.

Mild weather and heavy rains have left country roads in bad shape with the result that buying has been curtailed in farming retail centres. Automobile dealers note too that sales of cars are slow while roads are in such a condition as to discourage the use of new machines.

"NORMAL" MONEY IN LONDON

Pointing out that the English bank rate is now back where it was in 1914, The New York Herald declares that "it takes a cold calculating English banker to throw a dash of spirit into the inanimate world money market. Coming on top of the reduction to 3½ per cent. in the interest rate on United States Government certificates of indebtedness, the cut to 4 per cent. in the Bank of England discount rate is conclusive proof that the business of crape hanging in the financial world at an end."

The Herald declares further that it is up to America to make the next move pointing out that New York is still 4 per cent. on the open market while London quotes 2½ to 3 per cent.

Restraining Order Holds Up Dividends

Directors of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company were restrained on April 15th from paying the proposed semi-annual dividend of 2 per cent. to the preferred and common shareholders, in the restraining orders issued by the U. S. District Court in Minneapolis. The complaint of the preferred stockholders alleges that they are entitled to a preferential dividend of 7 per cent. before there can be any payments to common stockholders. Louis Hull, as intervener for the com-

mon stockholders, answers that the proposed dividend was to come out of the surplus of \$2,500,000, which the railroad accumulated from 1909 to 1919, after paying an annual dividend to both common and preferred stockholders. For this reason, he alleges it should be distributed to both groups.

DULUTH-SUPERIOR

For the first week of April passenger earnings of the Duluth-Superior Traction amounting to \$33,567, showed a decline of \$1,972, or 5.6 per cent., as compared with the corresponding period in 1921. For the year to date the earnings amount to \$459,096, a decrease of \$31,319, or 6.4 per cent.

We take pleasure in announcing that

MR. TURNER H. SKAITH

becomes a member of our firm as of this day

REPORT OF AUDITORS

To The Shareholders of The Weyburn Security Bank

In accordance with the provisions of sub-sections 19 and 20 of Section 56 of The Bank Act, we report as follows:

We have audited the accompanying Balance Sheet with the books at the Head Office and the certified returns from the Branches.

We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank, which have come under our notice, have been within the powers of the Bank.

We have checked the Cash and verified the Securities representing the Investments of the Bank at the Chief Office at a date other than and in addition to the verification at December 31, 1921, and find that they are in agreement with the entries in regard thereto in the books of the Bank.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

February 1, 1922. D. DEWAR, C.A., S. G. BROWN, C.A., Auditors. (of Marwick, Mitchell & Co.)
Winnipeg, Man.

THE FINANCIAL POST

Members of the Audit Bureau of Circulation
President JOHN BAYNE MACLEAN
Vice-President HORACE T. HUNTER
Manager GORDON RUTLEDGE
Editor J. W. TYSON

A weekly newspaper, presenting in a popular manner reliable information respecting investments and financial affairs in Canada. No paid advertising, other than annual reports or official notices of corporations, will be inserted in the news columns unless marked "Advertisement."

Advertising matter is investigated before publication, and none of known questionable character is accepted. Acceptance of advertising will not deter the editorial department from making such comments as the situation may suggest.

No material from news bureau sources submitted for editorial purposes will be published, and no such bureau or individual should be paid any consideration or given any credit for the insertion or inspiration of any item.

ADVERTISING RATES:

Single insertion \$2.50 per inch
Financial Reports, Advertisements, etc. 50c per agate line
SUBSCRIPTION PRICE:
Canada, the United States and Mexico \$6.00 per annum
Great Britain, Ireland, and Colonies having minimum postal rates \$1 1s. 0d.
France and other Countries \$1 7s. 6d.

TORONTO, APRIL 21, 1922

THE RICH GET RICHER

AND THE POOR GET POORER—was the basic impression speakers endeavored to convey at the Labor-political Canadian convention on Good Friday, according to the press reports.

This kind of talk persistently repeated is finally regarded as true by many wage-earners and farmers, particularly in the West. There never was a time when farmers and workers in Canada were so well off or lived so well. It is true there have been some crop failures in the West and some farmers are suffering great deprivations. So, too, are a number of workers out of work, many of them because they refuse to accept a reasonable scale of wages and others because they will not work and many excellent workers because of economic conditions for which they are not personally responsible.

While labor was damning capital and wanting to receive full pay when out of work, on holidays or for the hours taken off to vote, a representative of THE POST was visiting some houses recently erected in the suburbs for workers. The persons who will occupy them will have everything worth while in the way of conveniences, comforts and luxury that they will find in the homes of the majority of the so-called employers, capitalists or financiers. Even in the matter of food, spring lamb and asparagus now, and spring chicken and expensive California fruits later, are bought more by the masses than the classes—the classes who have made their money, built their businesses, providing employment by saving, saved by not indulging in luxuries.

VALUABLE EXPERIENCE LOST

THE DRURY government has made one mistake in the appointment of the commission to inquire into the Chippawa project. It has listened to the public ownership interests and entirely ignored the members of the Radial commission who spent months in investigating Hydro matters in connection with Sir Adam Beck's two hundred million dollar idea. It would have been an invaluable aid to this inquiry to have had at least one member of the former board to add to the deliberations the experience gained at such great expense to the province.

In either General Mitchell, experienced engineer and military investigator, or A. F. McCallum, a recognized authority on municipal administration, there was available an appointee who from technical training could have given great service to the investigation in rounding out the general conception of the Hydro scheme so necessary to a proper understanding of the whole undertaking from the standpoint of sound business. But, of course, this is the last thing that Sir Adam Beck and others who capitalize public ownership to their own aggrandizement or benefit—particularly certain newspapers—wanted. Their desire was to hold the inquiry to a legislative committee to deal with Col. Carmichael's accidently used term "dishonest." But the government properly decided that "dishonesty" or "inefficiency" were practically the same thing when they added millions to the cost.

The Chippawa inquiry should not only reveal to the people why the undertaking is costing many times the estimates—even on a war-time basis—but it should also relate this cost to the probable market for the product on a competitive basis with Quebec and the United States and indicate what the burden on the general taxpayers will be if power is sold at a price to allow Ontario manufacturers to successfully compete with manufacturers securing power from other sources.

Apart from this lost opportunity for continuity in Hydro investigation the personnel of the Chippawa commission again emphasizes the desire of the Drury Government to get results. The men appointed are representative of their fields, engineering, construction and industry, and evidently chosen to avoid any charge of unfriendliness to public ownership—this is particularly indicated in the appointment of Mr. Ross of Montreal who is one of the Hydro Commission's consulting engineers.

PUBLIC OWNERSHIP GONE MAD

AN OUTLINE of the power situation in St. John, N. B., has been given in THE FINANCIAL POST: the city proposes to go into the distribution business with a duplicating system, forcing the N. B. Power Company to continue to give street car and gas service at losing rates while competing in the lighting and power field and to not only take over these plants in the event of the service not being satisfactory but to confiscate the properties to cover any deficits which may result from municipal operation.

The St. John Standard declares that citizens realize that they now pay the Power Company higher rates than warranted for light and power but appreciate that cheap street car and gas services are adequate compensation; condemns the proposed course as confiscation of the investment of \$3,000,000 by the company's shareholders. The Standard continues:

If the city wants the benefits, let it assume the burdens also. The bill sent up to the Legislature aims at permitting the city to take all the former, and leave the company in full possession of the latter. And if the company declines to be made so much of a goat, the city wants to sell its property as a punishment.

Never in the history of Canada has such a bare-faced steal been suggested as this is. The Bolsheviks' plans in force now in Russia have nothing on this thing. In Nova Scotia where some time ago, exactly the same conditions prevailed, sane and sensible business men got together and worked out a plan fair and satisfactory to all concerned. The Legislature of this Province is elected to deal fairly with all classes of citizens, and to see that justice is dealt out to all alike.

The Public Utilities Act is based upon well-established usage all over this continent. It can penalize any public utility to the point where such utility must obey the ruling of its administrators. The city's bill is designed not to penalize, but to annihilate.

The high-handed course proposed by the council is not in accordance with the common-sense recommendations of R. A. Ross, Montreal, expert engineer called in by the city. Mr. Ross recently appeared before the people of St. John to publicly stand by his recommendations that as the Power Company and the city could buy the power from the Utilities Commission for the same price it was an economic waste for the city to build a new distribution plant. Further, however, Mr. Ross declares that the Musquash development—by the government—is not a sound business proposition and that "I could put in a steam plant here which would knock Musquash all to pieces." Mr. Ross has been recognized as one of the highest authorities in this field.

The New Brunswick government has made a mistake in trying to develop power where there is not sufficient water flow to provide a supply without huge storage capacity. The city is tied up to a contract to take this power. It would be poor business to make another mistake and build a second distribution system when there is no evidence that a reasonable arrangement cannot be made with the Power Company to give service.

SHALL OTTAWA PAY FOR CHIPPEWA?

IN LAST week's issue THE FINANCIAL POST observed:

Public ownership cannot be responsible for the transportation problem which the Canadian government has on its hands but unless the present administration faces the issue with courage and determination and has the co-operation of the opposition in bringing about real efficiency in the co-ordination and operation of the roads then public ownership will probably have to accept the responsibility for a still more serious situation in the future.

On the same day that this appeared, The Toronto Globe and other public ownership papers which voice the Hydro first and Hydro only slogan, indicated a line of policy which promises to very much embarrass the government in securing efficient administration of the roads; they flare-headed a demand by the Ontario Labor party for the electrification of steam roads and the adoption of the Beck scheme of radial roads. The fact that in printing such a report these papers misrepresented what had actually taken place and were later censured on resolution, only goes to emphasize the lengths to which they will go to create a market for costly Chippawa power—even at the expense of the government roads which are now such a burden upon the taxpayers of Canada.

If government steam roads are to be electrified it must be on the basis of efficiency and the commission to be appointed by the government to administer these lines should decide upon such a step only when it can be shown that it is cheaper to operate with electricity than with coal. The heavily encumbered system with its millions in deficits should not be called upon to use Sir Adam Beck's Chippawa power unless it can be supplied at a price to warrant the change being made without increasing the tax burden on the people of Canada. The Toronto Globe as organ of the government would be the first paper to recognize this were it not entirely blinded to the public interest in its efforts to pull Beck's Chippawa chestnuts out of the fire.

So far did the Hydro press go in misrepresenting the attitude of the Ontario Labor party on the matter of electrification and Hydro radials that the Hamilton convention passed a formal resolution of protest against the reports printed, and declaring that "while we do not oppose the construction of radials where they are necessary and absolutely strong we are absolutely against the duplication of and reduplication of railway lines now in operation and owned by the people." This was a straight endorsement of Premier Drury on radials and a declaration against interference with Ottawa policy with regard to the steam roads; the Hydro newspapers had asked the public to believe the exact opposite.

If in addition to political interference the National railway commissioners have to deal with an effort on the part of public ownership to sacrifice public ownership at Ottawa in an effort to justify Sir Adam Beck's schemes the outlook is depressing for the Canadian taxpayer.

EDITORIAL NOTES

THOSE WHO are offered an opportunity to get in on the ground floor should look carefully for trap doors to the cellar.

THE CHARGE is made by the Tin Hat Review that collections for relief have been made in Toronto under the auspices of the G. A. U. V. on which a commission of 35 to 40 per cent. was paid to the collector. It would be interesting to have a statement to indicate how much of the "Save the Children" fund actually reaches the "starving children" of Russia.

FOR MANY YEARS the Glasgow Tramways system has been held up to the world as the shining example of the success of municipal ownership. Now we are informed by H. Gordon Selfridge, who has initiated Great Britain to the American department store idea, that the Glasgow Tramways are running in arrears and that the deficit is being taken out of the city's treasury. Have the public ownership enthusiasts anything left to support their theories?

SASKATCHEWAN'S new premier, C. A. Dunning, has issued a manifesto in which he speaks for "continued application of the co-operative principle to economic problems connected with producing the marketing." Premier Dunning, it will be noted, is for encouraging the people to solve their own problems rather than have the government solve—or finance—them for them. And co-operative projects are successful when those interested expect from their associations less in service than from private business.

Grand Old Man of C. P. R. Finance

From the N. Y. Journal of Commerce.

One of Canada's grand old men, who has not only figured prominently in the development of the Dominion but has lived to see many of his dreams come true, is Richard Bladworth Angus of Montreal, one of the first promoters and organizers of the Canadian Pacific Railway.

On May 28, next, Mr. Angus will attain the age of 91 years—a life span of hard work and continual fight for progress and sound development. To-day R. B. Angus is hale and hearty and looks almost as young and as active as he was ten or more years ago.

Mr. Angus was born in Bathgate, Linlithgowshire, Scotland, in 1831, being one of four brothers. He received his early education at Bathgate, where he attended the academy, but early in life left his home hearth and entered the banking service of the Manchester and Liverpool Bank.

In 1857 Mr. Angus came to Canada and located at Montreal, his first position being one with an annual salary of \$600, and his first chief the Hon. Peter McGill, in the service of the Bank of Montreal.

As a banker Mr. Angus was highly successful and within three years had risen to the position of chief accountant. In 1862 he assumed charge of the bank's Chicago agency. Shortly afterward he was appointed associate manager of the New York agency of the bank. In 1864 he was brought back to Montreal as Montreal manager and held that position during the next five years. He then became general manager of the bank, succeeding the late E. H. King. His tenure was long and constructive and greatly aided in upbuilding the great strength of this institution.

First Railroad Venture

In 1879, however, Mr. Angus was called from the banking to the railroad sphere. Several prominent Montrealeers had bought out the Dutch interest in the St. Paul, Minneapolis & Manitoba Railway and Mr. Angus was asked to become their representative in the company, assuming management of the road. His great success during the two short years of his residence in the American Northwest is a matter of history. His was an era of development and expansion.

May 12, 1879, saw Mr. Angus appointed a director of the Bank of Montreal, a position he has held up to the present time, while thirty-one years later he was destined to become its president for a memorable tenure of office.

The part he played in the development of the Canadian Pacific Railway has been alluded to in historical works as one of the most constructive individual efforts apart from Van Horne. He early saw the tremendous growth which was ahead and worked for the development of a railroad along the broad national lines which the Canadian Pacific now typifies. Mr. Angus was one of the early organizers of the Canadian Pacific and has remained a director of the corporate company which it became, ever since.

Mr. Angus possessed a wonderful foresight which told him that the future of the continent rested in the Northwest and he did his best to bring about its logical and sane development, fostering schemes for the progression of the railroad and the development of what is to-day one of the finest wheat-growing areas in the world. The vast work of claiming a wilderness to the needs of civilization was shared in by this grand old man of Canada. Mr. Angus, through his experience with the expansion of the great transcontinental railway was also invaluable in the expansion of the wonderful branch bank system of the Bank of Montreal, being able to advise as to the logical points at which branches should be opened and to post the management as to the necessary methods of establishing the bank in this new territory.

Heads Bank of Montreal

Mr. Angus was elected to the presidency of the Bank of Montreal on July 2, 1910, succeeding the late Sir George Drummond. Despite his age he took up these heavy duties with great zest, for it must be remembered that he was then eighty years of age. He held this difficult position of head of Canada's largest banking institution until November 3, 1913, being succeeded by Sir Vincent Meredith, who still retains this position.

Mr. Angus always had the time to spare to encourage new enterprise, and during his lifetime became connected with a large number of companies. Among some of his most outstanding connections in this respect might be mentioned the Canada Northwest Land Company, of which he was a director; the Dominion Coal Company, director; Dominion Bridge Company, director; London & Lancashire Life Assurance Company, as well as a number of other organizations whose names are household

words in this country and the rest of the world.

Mr. Angus has devoted a great deal of his time to the furthering of the Royal Victoria Hospital of Montreal, of which he was at one time president, and was also a director and close friend of the Montreal Sailors' Institute. He is a member of long standing in the St. Andrew's Society and was for some time its president.

Many Activities

Mr. Angus maintains a residence on Drummond street, Montreal, which has become one of the best known dwellings in the city. He also maintains a beautiful country estate at Senneville, on the Lake of Two Mountains, a few miles distant from Montreal. He was at one time president of the Montreal Art Association, and is the proud owner of a famous collection of paintings.

He has always taken a keen interest in club life, and is a member of the St. James Club, the Mount Royal Club, Montreal; the Forest and Stream Club, Dorval; the Royal St. Lawrence Yacht Club, Montreal; the Rideau Club, Ottawa; the Toronto Club; and the Manitoba Club, Winnipeg. He has been a Past Master of St. Paul's Lodge, E. R., and is a Knight of Grace of the Order

PERSONALS

A. E. REA, president of the Dominion Combing Mills, has sailed for England to purchase the machinery for the plant to be established at Trenton, Ontario.

TURNER H. SKAITH, who has recently accepted a partnership in the investment house of McDonagh, Somers Company, Toronto, was born in Toronto. Educated at Upper Canada College, he entered the employ of the Dominion Securities Corporation as a junior. Mr. Skaith remained in the services of the corporation for twelve years, resigning only to take up his present position.

M. A. MILLER, of the law firm of Morphy & Miller, Weyburn, Sask., who has been elected to the Board of Directors of the Weyburn Security Bank, succeeding F. C. Moffatt, whose resignation was accepted with deep regret at the annual meeting held April 4, is a son of the late H. H. Miller, of Haverhill, Ont., who for a long time represented South Grey in the Dominion House. When Mr. Miller died the Liberal nomination was offered to M. A. Miller, his son, then under thirty years of age, whom it was believed could make the best run for the seat which his father had lost on the reciprocity issue. M. A. Miller refused this nomination to go back to Western Canada.

TALMON HENRY RIEDER, President of Ames, Holden, McCready, died at the week-end at the age of 43, following an attack of pneumonia. Those in close touch with this boot and shoe organization were aware of the heavy load carried by the new president during the past couple of years, and this, it was believed, seriously undermined his health. It is doubtful if any industry in Canada has had to face a similar disorganization, and has been as long awaiting recovery. Mr. Rieder's early activities and, indeed, the greater part of his life, were connected with the rubber industry rather than that of boots and shoes. He was for many years connected with the Canadian Consolidated Rubber Company, which had a factory in Kitchener, Ont., near where Mr. Rieder has been educated. He rose rapidly until he was president of the Consolidated Rubber Company, and of the Canadian Consolidated Felt Company. When D. Lorne McGibbon retired from the presidency of Ames, Holden, McCready, Mr. Rieder, who had associated himself with this business a short time before, became president. He developed in a short time several of the lines with which he had been connected in the other company, the manufacture of automobile tires, felt footwear and rubber footwear, and all three of the new lines were showing satisfactory progress at the time of his death.

LORD SHAUGHNESSY, former president of the Canadian Pacific Railway Company, and now chairman of the Board of Directors, is paid the following tribute in the "Financier and Bullionist" of London, Eng., on the occasion of his recent visit there:

"Of a naturally modest, retiring disposition, except when aggressiveness demands other qualities, Lord Shaughnessy dislikes the limelight into which his prominence and social and business circles has forced him, and I doubt if he does not enjoy a quiet game of solitaire or a few hours on the links far better than he does the great, glittering banquet board or other public festivities. He is an ideal host, loves his home and home life, and enjoys having companionable people with him. Maintaining the strictest discipline, dignified, he is one of the kindest of men. Beloved by all, with an affection that permeates the ranks from the higher to the lower grades, still in harness, Lord Shaughnessy's evening of life is pleasantly passed, and the hope is fervently expressed, not only by those who have grown grey in the service, but by thousands of others, that the 'T.G.' of years ago, the 'Mr. President,' the 'Sir Thomas,' and 'My Lord,' will long remain to be the guide, philosopher and friend of those who, like myself, have learned his actual worth. Fully realizing the true nobility of his character, and fondly cherish the inspiring memories of his loyalty and deer-coated affection and friendship."

IF HE HAD A MILLION

Joe Brown was the colored porter at a little bank in Southern Kansas. One spring day he rested on his broom and looked outdoors where Nature beckoned him down to the river where he might doze and wait for a catfish nibble on his line.

"Ge, boss," he declared fervently. "I suttinly do wish ah had a million dollars!" "A million dollars, Joe?" the cashier said, smiling. "What would you do with a million dollars?" "Ah'd buy me some pigs and make me some money."—Judge.

Special Custom-Built Bodies

Write us stating kind of Chassis you have and style of body you are interested in—Sedan, Coupe, Limousine, Town Car, Touring, Sport Roadster, etc.

All bodies are aluminum, built in an exclusive design to your ideas, if desired. We will submit suggestions without charge. Address Dept. 7.

INVESTORS' INQUIRIES

Information under this head is given in answer to direct requests from investors who are readers of THE FINANCIAL POST. Only questions respecting securities are answered by mail direct. We would remind correspondents that it is now necessary to enclose 3 cents in postage stamps to cover postage on answers direct.

ST. CATHARINES BONDS

L. A. W., Kingston.—Will you kindly advise me, what you think of City of St. Catharines debentures as an investment? I have \$3,000, 1925 war bonds 5%, which I would like to exchange for St. Catharines 5% bonds, the present price being about \$96.

We would consider bonds of the City of St. Catharines a safe investment. Most Canadian municipalities are sound and certainly such a city as St. Catharines. The exchange could be made to your advantage.

BISHOP-BLANEY CORPORATION

Winchester.—Would you kindly favor me with your opinion of the Bishop-Blaney Corporation, Limited, as an investment?

The Bishop-Blaney Corporation absorbed the old Dominion Dustless Sweepers Company, and are engaged in the manufacture of dustless sweepers for street cleaning. Considerable experimenting has been done on these machines and to date, six machines have been built. They are valued at \$15,000 apiece. The corporation is also considering the building of a four-wheel drive truck and a machine for removing dust from mills and factories. So far some \$120,000 has been sold in stock, chiefly in Eastern Ontario. When established companies are finding conditions at the present time difficult, the stock of this company at the present time in our opinion is a purely speculative buy.

RUGGLES MOTOR TRUCK

W. L. S., London.—Would you consider stock in Ruggles Motor Truck Company of London, a good investment?

Ruggles Motor Truck Co., is not now making a public offering of securities and we presume the shares that have been offered to you are some now held by a private investor. In that case the price at which the shares are offered is important. The stock seems to offer satisfactory possibilities and if you can pick up a few

shares at a reasonable figure they would make a reasonably good speculative investment.

The last statement of the company is as of June 30, 1921, and as the plant had then been in actual operation less than four months it is of little value in determining the company's present position. The plant is now working overtime, we understand, but future orders depend much upon the trend of business conditions. The management considers prospects bright.

CALL PRIVILEGES

P. G. L., Marysville, N.B.—What is your opinion of "Call Privileges"? Is this bucketing? If so, where is the catch in it?

The system of call or option privileges as used by Kennedy and Company of New York, is not regarded as legitimate business in Canada. The only possible chance you have of winning is in a very active market. Supposing that you wish to purchase a call or option on 100 shares of stock. The brokers will give the privilege of taking delivery of the 100 shares at any time within thirty days usually, at probably 2½ points above the market; for this privilege you pay him \$125. Your loss cannot exceed this amount and if the market improves 3½ points you break even and any further advance above this is clear gain, providing that it is within 30 days and you exercise the privilege of the call.

DOMINION TEXTILE AND PENMANS

Westerner.—Will you give me your opinion of Dominion Textile common; also Penmans common?

Dominion Textile is one of our favorites among the common stocks. The company has been unusually successful in its field, has a good reserve, and its prospects for continued success are bright. We believe that in a short time there will be a stock issue made which will be offered to shareholders at a figure that will mean a considerable value for the "rights." At the present price there is a return of about 8 per cent. on this stock. To a certain extent investment in a common stock carries some risk that one does not find in a high grade bond, but as a speculative investment of a high grade we would recommend Dominion Textile common.

Much the same would apply to Penmans common, the two companies having the same careful and able president, Sir Charles Gordon. Penmans mills manufacture knit goods where Dominion Textile produces cotton fabrics and yarns, but each company covers staple lines and are well regarded by the trade. In a period of six years the surplus earnings on Penmans were equal to the entire common stock outstanding.

ABITIBI PULP AND PAPER

T. Francis, Sask.—What is your opinion of Abitibi common?

The reaction in the paper business was more marked than in the textile or flour, and Abitibi last year was forced to reduce its common dividend, first to 4 per cent. and then to pass it altogether. Then this company has been passing through the development stage where the others had completed their extensions years before. Building operations for several years past have been a severe drain on common

earnings of the Abitibi Company, but we believe that the latter part of this year should find contractors' liabilities pretty well cleared away and in addition all fixed charges covered and a surplus remaining even with the present heavy reduction in the price of newsprint. The company at the end of its fiscal year, December 31, 1921, took a very conservative view in writing down its inventories of pulpwood and is now producing at a very low cost. Its production capacity has been greatly increased during the past two years and with a market secured for its whole capacity the outlook for earnings this year is

good. The weak point, in our opinion, about this stock is that it was split five to one in 1920 and that at the present market price of 50, a buyer is really paying over \$250 a share for the original \$5,000,000 of common stock. The split, we think, was excessive, as earnings must be proportionately higher in order to carry the dividend. However, half the increase in the stock has been covered probably already by the increased production. On the whole we believe the value should appreciate considerably in the next couple of years and the stock should before then be earning a dividend.

Investing \$10,000 To Best Advantage

Typical of the inquiries reaching the Investors Department of THE FINANCIAL POST is one from New Brunswick asking advice regarding the investment of \$10,000, to get "the best interest with safety." This inquirer already holds \$9,000 of municipal utility and industrial bonds, largely the latter and over 400 shares in a number of industrial and utility companies.

The inquiry was submitted to a number of leading Canadian investment houses and following is a summary of replies received:

A. E. AMES & CO., Toronto.—It should be laid down as a fundamental and basic principle that an investor should build up an income from investments of the most unquestionable type until his income from this source would be at least equal to the income received from the investor's business or profession. In this class would be Dominion and Provincial Government securities. When such an income has been attained, securities of a second grade or class, giving slightly higher yields, might be considered. Here we would class securities carrying the unconditional guarantee of the Dominion or Provincial government as to payment of both principal and interest.

The third class would include securities of Canada's oldest cities. As to what would constitute the fourth class there is room for much discussion. Well secured corporation bonds, issued by companies with long standing successful records, have much in favor but they should be chosen only after careful analysis and comparison.

Where the investor already holds a large number of securities of the corporation type we would strongly suggest that he strengthen his position by increasing his holdings of securities of the first and second class until the proportion mounted to at least in the neighborhood of 50 per cent. of the total holdings.

Having the above considerations in mind, as suggestions for an investment of \$10,000, we would submit the following: \$3,000, Dominion of Canada 5½ per cent. Victory Loan bonds, yielding 5.46 per cent.; \$2,000 Province of Alberta 6 per cent. bonds, yielding 5.45 per cent.; \$2,000 Province of Ontario guaranteeing Hydro Electric Power Commission 6 per cent. bonds, 1941, yielding 5.40 per cent.; \$1,000 Province of Alberta guaranteeing Edmonton, Dunvegan and British Columbia Railway 4½ per cent. bonds, 1944, yielding 5.50 per cent.; \$2,000 City of Montreal 5½ per cent. bonds, yielding 5.50 per cent.

CANADIAN DEBENTURES CORPORATION, Toronto.—We always advise our clients to carefully diversify their investments and in so doing they would seldom have any serious losses. In our opinion, the greater part of their holdings should consist of bonds selected from the standpoint of intrinsic security for permanent investment.

We would suggest the following bonds and stocks for the man who has approximately \$10,000 for investment:

Bonds—\$3,000 Province of Ontario, 6 per cent. due 15 Sept., 1943 \$2,000 Province of Alberta 6 per cent. due 1st Sept. 1941. \$1,000 City of Woodstock 6 per cent. due 1st April 1937. \$1,000 City of Hamilton, 6 per cent. due 1st Oct., 1932.

Stocks—10 shares, English Electric preferred, 8 per cent.; 5 shares Maple Leaf, preferred 8 per cent.; 5 shares Steel of Canada preferred, 7 per cent.; 10 shares Canada Cement preferred 7 per cent.

EASTERN SECURITIES CO., St. John.—We believe that the investor enquiring would be well advised to add to his holdings of bonds, as the larger portion of his present investment is now in preferred stocks. We would recommend that he purchase the following: \$5,000 Province of New Brunswick 6 per cent. bonds, due Dec. 15, 1941, yielding about 5.40 per cent.; \$2,000 City of Edmonton, 7 per cent. bonds, due June 1, 1941, yielding 6½ per cent.; \$2,000 Manitoba Power Co., 7 per cent., 1st mortgage bonds, due November 1, 1941, yielding 7 per cent. \$2,000 Dominion Iron & Steel Co., 5 per cent. consolidated bonds, due Sept., 1939, yielding 7.60 per cent.

This will mean an investment of \$10,260.30 without counting in the accrued interest and will give an annual return of \$628.66 or an immediate return of slightly over 6 per cent.

HUGH R. WOOD COMPANY, Montreal.—We feel that this enquirer should hold more Victory bonds so as to be in a more liquid position. A few days ago we had this query put to us: "I have \$10,000 to invest, and have never bought any bonds before, and would be glad to have your recommendation."

The following is our recommendation: \$2,500 Victory 1934 to yield about 5½ per cent.; \$1,000 City of Montreal 1932, yield about 5½; \$1,000 City of Port Arthur 1940, yield about 6.20; \$1,000 Quebec Jac. Car Electric 1931, yield about 8; \$1,500 Westmount Industrial Corp. 1931, yield 7.00; \$1,000 Tooke Bros., 1942, yield 7.25; \$2,000 Wilders Bleury St. Building 1932, yield 6.50.

F. H. DEACON & CO., Toronto.—We think your subscriber might well buy two or three long term bonds such as those of the Provinces of Alberta, or other Government or municipal bonds affording a yield of between 5½ and 6 per cent.

He might put part of his funds in the stock of some of the best trust companies, and the remainder might be placed in such bonds as: Dominion Iron & Steel 1st 5's due 1929, to yield 7.25 per cent.; Porto Rico Railways 1st 5's, due 1936, to yield 7.50 per cent.; Provincial Paper Mills 1st 6's, due 1940, to yield 6.55 per cent. There are several preferred stocks we think also good purchases at the present time.

HANSON BROS., Montreal.—Regarding the proposed investment of \$10,000, we would recommend that this be divided between provincial or municipal bonds, and sound first mortgage industrial bonds in the proportion of say 40 per cent. to 60 per cent. respectively. We would suggest any long dated provincial issue which may be obtained to-day to yield from 5.40 to 5.60 per cent., the balance being used to purchase one of two sound industrial bonds such as: Tooke Bros., 7 per cent. first mortgage bonds, due 1942, to yield 7½ per cent.; Provincial Paper Mills, 6 per cent. 1st mortgage bonds due 1940 to yield about 6.60 per cent.; Fraser Company, 6 per cent. bonds, due 1929, to yield about 6½ per cent.

The latter two issues have also the advantage of being payable in New York as well as in Canada. Several of the preferred shares mentioned must be considered, to say the least as speculative investments. We believe they should be disposed of as soon as market conditions permit the holder to get a bid on them without suffering too great a loss on principal.

We consider the present time an inopportune one for the sacrificing of securities, believing that the market prices should gradually reach a point when the depreciation will be considerably lower than it is at present.

W. A. MACKENZIE & CO., Toronto.—Recommend the first mortgage 7½ per cent. bonds of the Border Cities Hotel Company of the debentures of the Mount Royal Hotel Company.

AEMIUS JARVIS & CO., Toronto.—An inquirer holds only \$9,000 par value of bonds and a large portion of capital is invested in preference stock, suggest the investment of the whole \$10,000 now available in high grade government or municipal bonds. Those classed as legal investment for trust funds are recommended.

A. D. MORROW & CO., Toronto.—We think it appears that inquirer has practically all his money invested in public utility and industrial company bonds and stocks and we think he would do well by investing his present available funds in government or municipal bonds. Suggestion: \$5,000 Dominion of Canada 1934's, yield 5.47 per cent.; \$3,000 Province of Alberta 6 per cent. 1934's, yield 5½ per cent.; \$2,000 City of Toronto 6 per cent., 1938's, yield 5.45 per cent.; \$3,000, Greater Winnipeg Water District, 6 per cent. 1940's, yield 5½ per cent.

If sound dividend paying stocks preferred, suggest: 50 shares Mackay common; 35 shares Consumers Gas; 50 shares Bell Telephone.

CURRENT OPINION

TAKING JAZZ OUT OF BUSINESS

Dodge Idea

A certain business man faced what he believed to be a crisis in his business. At this psychological moment a gentleman—God save the mark!—dropped in his office and offered for a monetary consideration, to put the business on its feet once more. The gentleman referred to was an earnest exponent of jazz; one of those super-optimists who have a firm personal belief that jazz principles and a general whoop-her-up attitude coupled with much talk can run any business.

The business man fell for the breezy line of conversation and large promises, and within a short time found out the error of his ways and repented with great enthusiasm after the jazz business builder had gotten his business into a terrific tangle.

Thereupon the head of the business proceeded to use brute force on the business builder and took charge of the affairs himself.

There has been too much jazz in the business of the past few years—there has been too much talk and not enough thought. Vague promises of profits were seized upon as excuses for the expenditure of large sums of money. Jazz in business has been responsible for huge wastes of time, money, prestige and profits.

Thank heavens, 1922 promises to be a year where business decisions will be made sensibly and only after due reflection and analysis. Jazz in business is going out of vogue, and with it are going a crowd of business vamps—getting all they could from business and in return giving only conversation, promises, and smiles. The exit of these so-called "business builders" is one of the promising signs of the new year. May they never come back!

STATISTICS VS. ORDERS

A young man who inherited a fair estate several years ago has been devoting the interval to perfecting himself as an analyst of corporate finance. He was advised that, in order to safeguard his property which consisted mainly of securities, he should establish a good foundation by grounding himself in the fundamentals of investments. He arranged all the listed corporations into groups,

A Growing Business

DEMAND for telephones grows faster than the population increases. Had the population of Canada increased as rapidly from 1900 as the number of telephones has increased, Canada would now have a population of over 50,000,000.

The demand for telephones has increased so rapidly that there has been a waiting list of 17,000 to 19,000 applicants for service for over two years, although more than 23,000 new telephones were installed in 1921.

The new \$2,000,000 issue will install the plant and equipment necessary to supply this demand.

Eight per cent. dividends have been paid for thirty-six consecutive years on the stock of this company.

Price at market to yield about 7.50%.

NEWS OF THE BOND MARKET

LONG TERM ISSUE DOMINION LOAN SEEMS FAVORITE

Suggestion of 25 Year at About 5 1/4% is Heard

From Our Own Correspondent
MONTREAL.—Interest in the forthcoming Dominion Loan has become of absorbing interest here as a result of the conference at Ottawa last week between the Minister of Finance and banking and other financial interests. It is only natural that investment houses should desire to learn as soon as possible the date of the new issue, for it is taken for granted that once it is on the market there must be a more or less cessation of activity in bringing out other issues. As the time is approaching, however, within a couple of months of vacation, it is being taken for granted that there is little likelihood of a loan until next Fall.

When the question as to what amount this country can absorb is discussed the amount favored varies with the nature of the issue that is decided on. From the standpoint of the Government, as of a private corporation, there are arguments for a short-term issue on the ground that when that issue matures it could be refunded at a lower rate of interest than it would bear at the present time. The main question, however, that seems certain to decide the point is what form of bond will prove most acceptable to the investor, while at the same time bearing a low enough rate of interest to hold up the credit of the country.

Institutions Favor Long-Term Bond
It is recognized, of course, that the sentiment that lay behind so much of the investment in the earlier issues has ceased to be a factor, and the Government must offer a business proposition to most prospective investors in order to make them accept. It is also recognized that industrial corporations will not have the amount of money available that they had certainly in the last loan of 1919, and that in general, while savings deposits have kept up well, there may be less readiness on the part of a portion of the public to invest large sums in the new issue. The attitude, then, of large institutions like insurance companies, that will have to be counted upon for taking large blocks, and also the private investor who has large sums of money at his command, probably will determine the nature of the bond offered. There is no question, of course, in this event that a long-term bond, twenty or twenty-five years at least would be the choice. Insurance companies, as has been stated before, are looking for these long term issues as giving them a higher average rate over the period than they could get if they invested their money in two or three short-term issues instead.

It is also felt that a long-term issue would command a higher price, that it would permit of a lower interest rate than a short or medium term bond. It seems to be the general feeling that 5 1/2 per cent. is the lowest rate that the Government could safely attach to a bond for a short term issue when there is such a large sum to be secured. It is easier to dispose of small blocks of high grade provincial or municipal bonds at a shade under 5 1/2 per cent. yield, that it would be \$200,000,000 of Government bonds. A long-term bond it is thought might be issued at 5 1/2 per cent., but not at 5 per cent. at this time, so that a twenty, twenty-five or thirty-year issue perhaps at 5 1/4 per cent. seems to be the general guess in financial circles here.

Banks Favor Canadian Loan
It is understood that the weight of opinion of the banks is in favor of the loan being made in Canada rather than offered in the United States. Several arguments are advanced in support of this. One of them is that there is abundant capital available in Canada, and that if a couple of hundred million dollars were brought into the country from outside there would be a surplus of funds and this would tend to start a movement towards inflation or speculation once again. It is also felt that in the long run, if the loan was made in Canada and the money kept here, the effect on the rate of exchange would be more favorable. On the other hand, the point is advanced by some bond houses that Canada should float its Government loans outside to leave money available for the development of Canadian industries such as public utilities and ordinary industrial plants, but it is held that it is only natural for Canada to look to the outside, New York or London, for developing her natural resources for many years yet, as has been the case in the past.

It is being taken for granted that the Government instead of offering the bond houses and other selling organizations the new bonds on a commission basis will ask them to form themselves possibly into a large syndicate and underwrite them.

Longer Term Victory Bonds Are Still a Hold for the Investor

A matter of a few months ago Canadian Victory Bonds started on a mad rampage that delighted their several hundred thousand owners by bringing even the lowly 1934's to par, or so near par that it was only a step upward to that point. Since then they have settled down to a less energetic existence and changes marketwise have been minor.

What is the future? Now that the Victories have come into their own what is likely to be the direction of their movements, looking over a comparatively long term? Before attempting to answer the questions it might be remarked that while Canadians have been asking themselves this question for the past three months or so, over on the other side of the Rush-Bagot imaginary line they are just now beginning to ask the same questions about their own Liberty and Victory bonds which have finally dragged themselves to the 100 level—some of them over that. For instance we have Richard Spillane discussing the question in the Philadelphia Ledger in this fashion.

"What will Liberty Bonds do market-wise now that they have gone to par? This writer, who has argued, begged, pleaded in print many times in the last four years with the patriotic women and men of small means or of modest means to hold to their bonds, and assured them the price would go to par and above and they would be rewarded for their patience and, to a degree, for their faith, will endeavor to answer the question.

"It is likely there will be a temporary reaction. There are many men of wealth who 'bought till it hurt' when the war was on. These men have had to stand financial punishment for their fidelity to their country. One textile man of the Keystone State bought \$10,000,000 of Liberty bonds—and held on to them. Some of the men whose purchases of Liberty Bonds were very large have had to hypothecate them with the banks to finance their businesses. Some, when call was made for them to reduce their loans, have had to sacrifice some of their bonds. The majority of these men will sell their holdings, now that they can get par for them. In the judgment of one of the soundest bankers in America, this liquidation will be considerable. It should check any further advance at this time and bring about a decline. What this recession will amount to is doubtful, probably

a point or two. It is not likely to be much more.

"As to the general public, no one can speak with authority. No one statement fits all the people. Any one, however, who is a fair judge of the average man or woman is likely to agree with the statement that a bond is held in higher esteem when above par than below. Hundreds of thousands of persons who were worried about their Liberty Bonds two years or so ago have no such worry to-day. They have had proof that their fears were without basis. The vast majority are likely to hold to their bonds.

"It would seem, therefore, that while liquidation will come from large individual holders and some small holders, the banks and the bulk of the small holders will stand pat. So soon as this liquidation ends and the offerings are absorbed fully it is virtually certain Liberty Bonds will start an advance that will carry them into new high ground.

"Hold on to your Liberty bonds," is Mr. Spillane's parting advice. It is good advice and can be applied to the Canadian issues by our own investors. They will lose nothing by holding their Victory bonds. In the end they will profit. Some of the issues may be momentarily fixed in price. In the taxable 1934 issue it seems doubtful if there can be any immediate advance of great proportions. There are so many large holders of this issue that have been waiting for the bonds to reach par before selling and who may liquidate their holdings to some extent that the price is almost fixed for the moment.

But as money rates lower and bonds rise in price even these holders will think again before selling when the best yield they can get on provincial bonds is no better than the yield on their 34's—although many provincial bonds have longer terms of course.

The tax free issues—especially the 1933 and 1937—do not seem even yet to have discounted the tax free feature and are due to climb as bonds continue to rise.

Victories of all the longer issues are a hold. The holder of 1922, 1923 and even 1924 is justified in selling to reinvest in longer term bonds—even industrials if the investor is so inclined—but the longer term bonds will lose nothing as time goes on.

A New York Opinion on Defaults

Comment on Western Canadian defaults is given in the current issue of the "Bond Buyer" of New York. The "Bond Buyer" quotes the following editorial from a New York financial paper which is not especially interested in Canada or in municipal bonds:

"Western Canada confronts a perplexing financial situation. Out there a considerable number of municipalities and school districts are either unable to meet the interest on bonds they have issued or appear unwilling to do so. That section of the Dominion grew so fast that the communities now in default apparently misjudged their taxable powers.

"One dealer who has handled as much as 1,000 of such municipal issues reports more than 200 of them now in arrears with their interest. The situation is not one of comfort for Canada, whose credit has been always of the highest. With so many bond issues in default it is impossible to avoid impairing the confidence of investors, for municipal obligations are regarded as one of the prime and safest securities.

"Pressure is being brought by Canadian dealers in municipal obligations upon the provincial authorities of Saskatchewan and Alberta, where defaults by municipalities and school districts are the most plentiful, to use their efforts to restore their finances so that they can at least effect a compromise with the holders of their bonds, which would eventually assure a full payment.

"Such a settlement should not prove difficult to bring about if the holders of these defaulted obligations were made to understand that they would not lose anything except the time it requires to restore the embarrassed communities to sound financial footing. Probably this can be done through some form of guarantee by the Provinces themselves, covering a period during which they could reimburse themselves out of taxes for whatever advances are made upon defaulted bonds.

"Some such action will be necessary if the high credit of Canada is to be maintained."

Discussing the opinions of this paper the "Bond Buyer" says:

"It is interesting as illustrating the sort of publicity which Canadian municipal bonds are beginning to receive, which is another way of telling the authorities of Canada's large cities and provinces that it is high time these small municipal defaults were wiped off the slate."

Toronto, Ottawa, Ontario Province.

and dozens of other political sub-divisions of the Dominion are favored borrowers down here. Even our mutual savings banks, in some States, are permitted to loan their deposits against Canadian public bonds. But if the investment public of the States is to continue reading editorials such as the one quoted, how long will it be before they become nervous about the bonds of the best municipal risks in Canada?

N. S. TRAMWAYS EARNINGS

Substantial Increase Shown for Past Twelve Months

From Our Political Correspondent
MONTREAL.—The ability of Nova Scotia Tramways and Power Co., to reduce its operating costs was responsible for a marked improvement in net earnings for the first quarter of the present year. The gross earnings declined about \$12,000, but operating expenses and taxes were reduced by nearly \$44,000 so that net earnings stood over \$30,000 ahead of the corresponding period of 1921. After payment of interest charges there remained a surplus for the three months ended March 31, 1922, nearly \$39,000. The following is a comparison of the figures for the two quarters:

	Three mos. ended Mar. 1922	Three mos. ended Mar. 1921
Gross Earnings	\$404,454.47	\$416,416.93
Operating Expenses and taxes	318,697.48	362,296.39
Net Earnings	85,756.99	54,120.54
Interest Charges	46,823.87	46,248.77
Surplus	38,933.12	7,871.77

For 12 months ending March 31, 1922, net earnings, after operating expenses, maintenance and taxes amounted to \$218,274 compared with \$89,892 for the preceding twelve months.

At a meeting of the Directors of the Ontario Equitable Life and Accident Insurance Co., at Waterloo, on April 17, Hon. Manning W. Doherty, Minister of Agriculture for Ontario, was appointed a member of the Board, to fill the vacancy left through the death of Dr. Wm. T. Wallace.

Flour Milling Shares
Are Advancing
If you read the papers you will have seen that the Shares of Milling Companies have recently shown a steady advance.
The reason for this is the fact that the Flour Milling Industry has come through the greatest period of business depression without affecting its earning powers or reducing its dividend rates.
In the case of the Copeland Flour Mills, Limited, the business since the Mill commenced operations has exceeded all expectations. Orders are far ahead of the expected—the quality of the Flour is excellent and they are milling at a cost per barrel considerably under the original estimate.
All of which helps to make for good dividends on the Common Shares now being given away as a bonus to buyers of the 8% Preferred Shares. And, remember, the Maple Leaf Milling Common Shares which are now worth about \$136 each were originally bonus Shares.
Our offering of Copeland Milling 8% Preferred Shares at the present price of \$100 with 30% in Common Shares is now largely subscribed. We recommend you to buy soon if you wish to be certain of securing an allotment.
Write immediately for Prospectus.

CIVIC AND PROVINCIAL FINANCE

ALBERTA IS AFTER HIGHER REVENUES

Taxes Increased on Life and Fire Companies

From Our Political Correspondent EDMONTON.—Life and fire insurance premiums in Alberta will hereafter be subject to a two per cent. tax instead of one per cent. as formerly. The increase has been made under the new amendments to the Corporations Taxation Act, but Premier Greenfield, in explaining the legislation to a recent meeting of life underwriters here, claimed that the effect would be only to place this province on the same basis as other provinces in the Dominion. In the loaning end of the insurance business he pointed out, the tax of one-half of one per cent. is still much less than in any of the other provinces.

From the several increases under the Corporation Act the Government expects to raise \$170,000 new revenue. Included in this will be the new taxes on insurance, telegraph, express, and elevator companies. The tax rate on joint stock companies of all kinds has been raised from twenty to forty cents for each thousand dollars of authorized capital.

Something over \$1,000,000 in new taxation revenue is expected this year. It will be made up, in addition to corporation taxes, by the doubled tax on coal, the new two-cent-a-gallon tax on gasoline, increase in the amusement tax, a new schedule of successful duties, restaurant and produce merchants' licenses, and increased mileage taxes from the Canadian Pacific Railway.

Alberta had a deficit in 1921 of \$2,022,387, due chiefly to too much optimism in past years with regard to the elasticity of revenues, according to Premier Greenfield.

Dunning Ready to Equalize Assessments

In his manifesto on being chosen Premier of Saskatchewan, Hon. Charles A. Dunning, promised the carrying out of assessment equalization in that province. In Saskatchewan equalization of assessments in all communities is especially necessary because of public revenue tax, which is levied for provincial purposes but is collected with municipal taxes.

At the session of the legislature just concluded legislation was passed providing for the appointment of the Saskatchewan assessment commission of three members to review the assessment of Saskatchewan municipalities and level undue differences between communities. This follows somewhat similar legislation in Alberta and Manitoba.

LAND OVERLOADED BY TAXES IN BOOM DAYS

But it Could Not Bear the Burden When Deflated Values Came

From Our Own Correspondent VICTORIA.—Overloading of land taxes when the land could stand it in the boom days and the consequent failure of the land to bear the burden when the deflation period commenced were blamed for British Columbia's major tax problems by Prof. Frank J. Laube, of the political economy department of the University of Washington, who spoke here recently before the Associated Boards of Trade of British Columbia.

"The Pacific Coast, unlike other parts of the world, has developed its industries—timber, mineral and fishing—first," Professor Laube explained. "Then we turned to the development of agriculture, the real basis of our prosperity, but we have hindered that development, loaded it down by crushing taxes on land. We shall not recover, we shall not be able to reach our full development until we reduce the taxation of our land. By such reductions and the consequent development of the land, we shall develop business, bring down the cost of food, the cost of labor. We have come to a time in the Pacific Northwest when we must encourage and develop agriculture and thus develop business."

The single tax, Professor Laube declared was satisfactory in old and well-settled countries where all land was occupied and developed to a high point. But the single tax here took away the owner's motive to exploit his land and failed to develop that "anchorage of the soil" which was the basis of national life.

Great Britain pays New York Federal Reserve Bank \$19,872,500 as second instalment on \$122,000,000 owed United States for war time silver purchases.

NOVA SCOTIA HAS DEFICIT OF \$67,000

Total Debt of Province is Now \$22,000,000 Year's Budget Shows

From Our Own Correspondent HALIFAX.—According to the public accounts which have been tabled in the Legislature the Government of Nova Scotia had a revenue during the last fiscal year of \$4,586,839, while its expenditures on current account totalled \$4,654,031. This shows a current deficit of \$67,191.

There was an actual increase in the revenue over the previous year of \$785,823, but at that the revenue was \$313,811 less than the estimates for the year. At the same time different departments over-expended their appropriations by \$200,478. Increases in revenues were mainly derived from corporation taxes, motor vehicle fees, and the sale of school books, while the over-expenditures were mainly on account of highways, hospitals and sanatoria.

Expenditures on capital account during the year amounted to \$3,307,275, mainly for road improvements and hydro-electric developments. The capital debt of the province at the end of the fiscal year, September 30, 1921, stood at \$22,387,801. Against this the province has assets valued at \$23,934,149, not counting the value of the minerals, ownership of which is vested in the province.

St. John City Competes In Hydro Power Supply

ST JOHN.—An act passed by the New Brunswick Legislature authorizes the city of St John to sell electric current in competition with the New Brunswick Power Company within the city and county of St John and also provides that if within twelve months the N. B. Power Company offers to sell to the city all of its properties at a price to be determined by arbitration, the city council may, if it sees fit, accept such offer and take steps to provide for arbitration as to the actual cash value of the company's business as a going concern. The Provincial Government has offered to sell hydro electric power produced at the government plant at Musquash at cost.

A delegation of representatives of bond houses and shareholders opposed the city's bill when it was before the corporations committee, some describing it as confiscatory.

TENDERS AND BY-LAWS

TENDERS WANTED May 18, Prince George, B.C.—\$44,000, 6 per cent, 10 and 15 years. D. G. Tate, city clerk and treasurer. (See announcement on page 16.)

April 22, Stettler, Alta.—\$15,000, 6 1/2 per cent, 15-year instalment waterworks debentures. E. Roberts, sec.-treasurer.

April 27, Regina.—\$434,650, 6 per cent, 5, 10, 15 and 30 years, various debentures. Jno. E. Snowball, City Treasurer, Regina. (See announcement on page 16.)

R. M. of Ochre River, Man.—\$30,000, 6 per cent, 30 year general improvement debentures. H. W. Johnson, Sec.-Treas., Ochre River, Man.

April 24, Thorold, Ont.—\$20,721, 6 per cent, 11 and 15 year debentures; \$1,963, 6 1/2 per cent, 15 year. D. J. C. Munro, Treasurer, Thorold.

April 21, R. C. Schools, Quebec.—\$580,000 5 1/2 per cent, 20 year bonds. General Manager, La Banque Nationale, Quebec.

April 27, Township of Burford.—\$14,000 6 per cent, 1 to 20 year, High School debentures. Allan D. Muir, Township Treasurer, Burford, Ont. (See announcement on page 16.)

DEBENTURE NOTES Winnipeg.—The Greater Winnipeg Water District will float a \$4,000,000 debenture issue in New York within the next two weeks to retire bonds maturing on July 1. Alternate bids for 30-year 5 per cent., and 20-year 5 1/2 per cent. bonds will be asked for.

Edmonton.—The Library Board has asked the City Council to submit a by-law for \$37,500 as part cost of the proposed new library. The estimated cost of the new building is \$150,000, to which the Carnegie Corporation will give \$112,500. The Finance committee approved of the plan.

SASKATCHEWAN

The following is a list of authorizations granted by the local government boards from April 1, to April 8, 1922:

Schools: — Codette \$500; Pathway Height, \$1,700; Wheat Plains, \$3,000; Lancaster, \$2,000; Kelvington, \$20,000; New Bank, \$600; Rocanville, \$3,000; Thrine, \$3,100; Village of Spring Vale \$1,000. Debentures reported sold from April 1 to April 8:

Norwich, \$3,700, 10 years, 8 per cent; Waterman Waterbury, Regina; Hampton \$1,000, 10 years, 8 per cent, Nay & James Regina; Kamsack, \$5,000, 5 years, 8 per cent, Various, Kamsack; Bowmore, \$1,000, 15 years, 8 per cent, Waterman Waterbury, Regina; Myrtle, \$3,300, 15 years, 8 per cent, Waterman Waterbury, Regina.

Rural Telephone Co., Perdue, \$1,900, 12 years, 8 per cent, C. C. Cross & Co., Regina.

ECONOMY IS WORD AROUND REGINA'S CITY HALL TO-DAY

City Hopes to Make Money on its Public Utilities

From Our Own Correspondent REGINA.—Forty mills is the rate of taxation for this city during the current year. This is a reduction of two mills over the rate which obtained in 1921 and is made possible by the fact that the city, in spite of increased fixed charges, is spending \$85,000 less this year than last.

Economy has a great vogue in the Regina city council this year. The minimum of expense has been ordered in all departments and the salary list of civic servants has been reduced five per cent. On a total assessment of \$43,258,850, it is estimated \$1,755,842.87 will be produced by the 41 mill levy. A 2 per cent. levy for purposes of provincial revenue is included in the 41 mills.

Another indication of the consistency with which economy is being carried out in Regina, is the budget for new finance just announced by the civic authorities. A total of \$434,000 in new bond issues has been authorized, the entire amount being provided to reduce a portion of the city's outstanding obligations.

This year the city expects to make money from the operation of its utilities, which hitherto—with the exception of the light department have been more or less of a white elephant. A surplus of \$61,000 is the amount included in the estimates in this regard; the light department is expected to produce approximately \$50,000 of this and the street railway, which represents an investment of nearly two millions, is expected to earn a couple of thousand or so.

New Brunswick Makes Plans for Borrowing

From Our Political Correspondent FREDERICTON, N. B.—The Provincial Legislature has adopted a bill providing for the refunding of the floating indebtedness of the province by the issue of serial bonds payable at the rate of \$20,000 per year. The floating debt was \$1,078,741, but the refunding of the St. John Valley Railway interest of \$240,000 in January reduced the amount to \$838,741. The provincial government was also authorized to borrow \$800,000 for further hydro-electric development. They have already borrowed \$2,000,000 for hydro-electric development.

Add \$60,000 to Issue of Bonds by Edmonton

From Our Own Correspondent EDMONTON.—The long term debenture issues of the city of Edmonton taken by Wood, Gundy & Co., of Toronto, at a price of 93.46, interest at 5 1/2 per cent. has been increased from \$870,000 to \$930,000. The proceeds will be used for telephone and power plant extensions and other capital expenditures. The Toronto firm will also handle a refunding issue of \$2,000,000, which is to be put on the American market shortly.

A money bylaw to provide \$37,500 for a new public library building will be submitted to the burgesses soon. The Carnegie foundation has agreed to increase its original offer of \$75,000 by half, making a total of \$112,500, if the city will raise a corresponding amount, and the citizens will therefore be asked to vote accordingly.

TAX RATE DOWN

Fort William's tax rate to meet the requirements for the current year has been fixed at 37 mills against 39 mills for 1921. The controllable expenditures were reduced by one mill, public schools, one quarter of a mill, which together with a slightly increased assessment enabled the council to strike a favorable rate.

The sinking fund of the city is in a very satisfactory condition, having over \$1,600,000 invested in Victory Bonds and the surplus earnings from the investments totalled over \$50,000 for the year.

MUTUAL PROGRESS - MUTUAL PROSPERITY
NINETEEN TWENTY-ONE—the fifty-second year in the history of the Mutual of Canada—will be ever memorable on account of the exceptional success attending the company's operations. The expense ratio decreased; the average interest rate increased; the mortality was amazingly light—three features which combined to give the policyholders surplus earnings unequalled in the experience of the company. The assets increased to \$46,211,304. An amount more than sufficient by \$5,790,520.70 to guarantee all claims. This surplus has been allotted to various funds, all of which are Policyholders' Funds. Nearly 100,000 policyholders and their families share in the \$228,000,000 of protection afforded by Mutual Co-operative effort. The company is increasingly popular because it offers its policyholders "The largest amount of sound life insurance for the least possible outlay."

King Edward Hotel of Toronto Handled Largest Volume of Business in History

Earnings Show Increase Over 1920, Dividend of 10% Maintained on Common Shares. Outlook Bright for 1922

The fifth Annual Meeting of the Shareholders of the King Edward Hotel Company, Limited, was held at Toronto on Tuesday, April 18th. The chair was occupied by the President, Mr. Frank A. Dudley, and the report submitted by him to the Shareholders was eminently satisfactory.

In reviewing the statement submitted, the President, Mr. F. A. Dudley, said in part:

"I herewith submit the balance sheet of the King Edward Hotel Company, Limited, as of December 31st, 1921, also profit and loss account for the year 1921.

"In reviewing the earnings figures for the year, it is necessary for me to remind the Shareholders that the property of the King Edward Construction Company was taken into operation under lease about September 15th, which involved an increase in operation expense, as well as a rental for the building for the most unproductive months of the hotel year.

"The year 1921 cannot be considered as a good business year, but rather a time of depression, so that the result of the year's operations may be taken as a satisfactory evidence of the stability of the Company's business.

"We therefore feel gratified that in the face of this depression through careful management we have been able to earn our dividends of 10% and to add to our surplus account the sum of \$16,540.13.

"Our balance sheet reflects the acquisition of 8,500 shares of the King Edward Construction Company, and we have created a special Reserve Fund for the purpose of keeping this item separate from our surplus account.

"I would draw your attention to the fact that during the year we have increased our fixed inventories by the large sum of \$409,215. This sum was used principally for furnishings for the new wing. This money was obtained partially through a loan of \$230,000, and from our accumulated cash reserve, as it was considered wiser by your Board of Directors to use available funds, rather than attempt further financing in the adverse money market which prevailed during 1921.

"The prospects for business for the year 1922 are showing an improvement over 1921, and with the conventions already booked, the tourist, exhibition and other regular business, we can confidently expect an increase in the current year, as well as even more satisfactory results when business returns to normal conditions."

The following Board of Directors were elected:—F. A. Dudley, President; F. W. Rockwell, Vice-President; Geo. H. O'Neill, Second Vice-President; W. A. MacKenzie, J. H. Spence, D. M. Johnson and D. H. McDougall.

The Profit and Loss Account, submitted by President Dudley, was as follows:

PROFIT AND LOSS ACCOUNT FOR YEAR ENDING DECEMBER 31, 1921

Operating Profit for year after payment of Taxes, Maintenance, Wages and other charges	\$289,005.42
LESS—	
Interest on 1st and 2nd Mortgages	87,883.33
Depreciation Reserve	70,474.25
Deductions from Income	\$158,807.58
Deduct 1920 Income Tax paid 1921	14,157.71
Net Available for Dividends	\$116,540.13
Dividends paid during year	100,000.00
Surplus for year	\$16,540.13
Surplus for previous year	100,493.53
Total	\$117,033.66

INSURANCE AND REAL ESTATE

RESIDENCES ARE SWELLING TOTAL FOR BUILDINGS

Toronto Continues to Indicate Great Activity in Homes

Although there are as yet no general indications that building costs have been brought to a level to encourage construction on a broad scale, the improvement in volume of business continues, as indicated by building permits reported to THE FINANCIAL POST and this improvement is of course accentuated by the fact that the increase in volume is even greater than the figures show when the reduction in costs already effected is taken into consideration. Activities are still largely confined to residential building by individuals where profits are a secondary consideration. So far as commercial or industrial structures or the speculative building of homes are concerned labor costs are still considered as being too high although efficiency has improved and materials have been generally adjusted to more satisfactory levels.

Forty-three cities report permits issued in March totalling \$9,170,000 which indicated an increase as compared with March of last year of \$2,770,000.

For three months the total of \$16,186,000 showed an increase of \$4,368,000.

The reports continue to indicate that the improvement is largely in Eastern cities, the increase for twenty-eight such cities being over \$2,500,000 for the month and \$4,250,000 for the year to date while Western cities were up \$259,000 for the month and only \$116,000 for the quarter.

Toronto is the outstanding city in all Canada with an increase of over \$1,800,000 for March and over \$2,260,000 for the three months; in addition York township, adjoining shows an increase of \$363,000 for the month and \$717,000 for the quarter. Montreal is about \$170,000 higher for the month but \$29,500 down for the three months, while Westmount, within Montreal, is \$44,650 higher for March and \$161,500 down for the quarter. Hamilton is only \$57,000 higher for the month and about \$110,000 for the year. Windsor and Kitchener both make a better showing while Port Arthur has an increase of over \$825,000 for the year to date. Halifax is second to Westmount in size of decrease, the total for the quarter being down \$137,500.

Vancouver is outstanding in Western cities for the extent of recovery indicated. The total for March showed an increase of over \$138,000 and for the year to date over \$150,000. Victoria is also making a very good showing. Edmonton is making a fair showing in the prairie city group but activities are limited.

The bulge in the figures for Port Arthur is accounted for in \$400,000 for Provincial Paper Mills and \$250,000 for a grain annex to Richardson's elevator. Windsor's total included \$689,000 for a technical school.

Woolworth is responsible for \$55,000 for a new store at Victoria. Sherbrooke includes \$80,000 for a city hall and \$22,000 for a fire station. However, the great bulk of the total is for dwellings.

SMALL ACTIVITY IN REAL ESTATE WORLD

Dealers Report Bulk of Sales To Be Small Lots at Present

Real estate dealers report that there has been a very large increase in the sale of small lots for home building purposes. At the present moment there is comparatively no industrial construction except that of where companies are forced to build or replace buildings that have been put off for several years. There is practically no building for speculation. Building costs and labor will have to come down a long way yet before much building is done on this basis.

Practically all of the lots being sold in the larger cities run from \$2,000 to \$5,000, indicating that the buyers will no longer face the high rents prevailing and have determined to build instead. House shortage also accounts for the increased activity along this line.

However, with coming of better conditions both financially and from the material side there will be no doubt, a considerable increase in building.

LONDON'S HOUSING LOSSES STILL GROW

People Who Paid High Prices Now Demanding a Cut to Reduced Level

LONDON.—The action of the local Housing Commission in cutting the prices of houses which last year sold for \$4,100, to \$3,395, quickly caused trouble among purchasers at the high figure. At the regular meeting of the Commission on Thursday night a request was received from a purchaser who had paid \$4,100 to be allowed to turn in his house at Pine Lawn and buy a higher-priced home in the Garfield Avenue section. It was explained to him that this could not be allowed. The house owner argued that he was placed in a very ridiculous position as a result of the cut made by the Commission. A compromise was finally arrived at by which the Commission agrees to allow all those who bought houses at the high price and are fully up in their payments by May 1, to have their houses for \$3,395. Nothing is said about the loss but it will have to come out of the pockets of the taxpayers.

Strike of approximately 100,000 paper mill workers employed by 17 concerns, with output of 4,500 tons of newspaper daily, threatened May 1, as result of proposed wage cut, says the Wall Street Journal. Manufacturers suggest 10 per cent. reduction for skilled men, return to locality rates for unskilled and straight time pay for overtime, Sunday and holiday work.

CIVIC EMPLOYEES OFFERED PENSION BY INSURANCE CO.

Three Classes Suggested in Plan Before Montreal Council

From Our Own Correspondent
MONTREAL.—The municipal authorities of this city have had placed before them alternative schemes for pension insurance for the civic employees by the Sun Life Assurance Co., and may be the first municipality in Canada to hand over pension arrangements to an insurance company. Under the plan as presented the employees would be divided into three classes: 1. Old employees who entered the service of the city over the age of 50, or who at the present are over 60 years of age; 2. All those not in class one, except the firemen and police, and 3. Firemen and policemen.

The cost of a pension for the first class is by far the heaviest of all for the reason that so large a proportion of these will have to be retired in a short time, and there has been no accumulation provided for them. This group numbers 80, and to insure a pension of half the retiring salary at the age of 65 would cost the city \$483,000, which could be provided for by an annual payment of \$50,000 until the proper amount was made up. By reducing the pension to one-quarter the salary the cost would be cut to \$25,000 a year.

The second group covers 761 men, ruling out 104 women employees who are not included in the pension scheme. For a pension graduated on years of service, the cost would be \$155,000. If the employees paid in a sum equal to 2½ per cent. of their salaries the cost to the city would be only \$79,000 a year at the start, graduating down to \$45,000 as older employees were replaced by younger. The scale suggested for these is that they receive 7½ per cent. of their salaries for 10 years' service; 15 per cent for 15 years, 22½ per cent. for 20 years, 30 per cent. for 25 years, and so on, until for 50 years' service the payment would be 67½ per cent. of salary.

\$660,000 For Fire and Police
The case of the fire and police departments presents a difficulty, as both already have a pension fund to which the men have contributed for a number of years. It would cost \$660,000 to provide a pension equal to one-half the salary, including a payment of a similar amount where a man was totally disabled in the service of the city, or one year's salary paid the relatives in the case of death before the pension age was reached.

\$104,000 for First Year
An alternative plan is offered by the Company under which the employees would contribute 2½ per cent. of their salaries, and the old employees would receive one-quarter instead of one-half their salaries. This would cost the city the comparatively small sum of \$104,000 for the first year, and this sum would gradually fall to between \$50,000 and \$70,000. This would not include the firemen and police.

The total cost of the first plan would be \$865,000. The firemen and police are unwilling to hand their fund over to the general advantage of the employees and no decision has been reached as to what disposition will be made of this. Their own suggestion is that it be utilized to provide a bonus in addition to what the insurance company proposes to pay them.

B. C. SALMON SUPERIOR

Siberian and Japanese Competition Is Not Feared

From Our Own Correspondent
VICTORIA.—Siberian and Japanese salmon is finding its way to the United Kingdom market, but the British Columbia canneries have nothing to fear from this competition, in the opinion of salmon packers and brokers from all parts of the Pacific coast, Alaska, Skeena, Rivers, Inlet, Fraser and Puget Sound who have just completed a thorough examination and comparison of the two products.

The Pacific coast salmon was found to be much superior to the Japanese and Siberian pack in firmness, oil and color.

LARGEST GROUP POLICY

Traveller's Insurance Company has just issued a group of insurance policy aggregating about \$50,000,000 covering life and accidents for the employees of the Lehigh Valley Railroad Company. This is probably the largest contributing group life insurance policy ever written and has many unique features. The option was submitted to the employees as to whether or not they wished to be covered. This required the solicitation of the required number of employees and was successfully accomplished by the insurance company in ten days.

Where Happiness Dwells and Beauty Excels

A summer day is long in Algonquin Park, inviting to out-door pastimes of all descriptions. The nights are cool and restful, with clear lakes reflecting the great stars that hang low in the Northern skies, and there is silence, except for an occasional fluted call, the dip of feeding trout or bass and the subdued song of water and stirring leaves. If you would experience such summer days as these, visit Algonquin Park, drink in with your lungs the air of its heights, with your eyes behold its manifold beauties and you will become a lover of this big unspoiled forest of the Ontario Highlands. Reached by Grand Trunk Railway. Illustrated booklet telling you all about it sent free on application to any Grand Trunk Agent or C. E. Horning, D.P.A., Toronto, Ont.

WANTED
One of our readers is very anxious to secure back numbers of THE FINANCIAL POST to complete his files. Would anyone having any of the following copies please communicate with us as soon as possible:
Vol. 13, No. 29 (July 19, 1919).
Vol. 13, Nos. 38, 39, 41, to end of volume.
Vol. 14, Nos. 1, 3, 4, 5, 9, 10 (January to March, 1920).
We would greatly appreciate receiving any of these copies that are available.

143 University Ave., Toronto

U. S. SOFT COAL SEIZES MARKET IN NOVA SCOTIA

Coal From Virginia Cheaper Than Coal From Sydney

WAGES & PRODUCTION

British Empire Steel Corporation Figures Indicate Startling Condition—Must Get Montreal Market

From Our Own Correspondent MONTREAL.—Figures have been submitted by the British Empire Steel Corporation in their protracted negotiations with the miners in connection with the Dominion Coal Company and "Scotia" mines in support of their argument that wages were increased much more relatively than the cost of living advanced, and that the new schedule offered by the company for the first of January last, and particularly the one recommended under the Gillen award, are still much above the relative level of the cost of living.

Table with 3 columns: Year, Wage Scale, Cost of Living. Rows for 1916, 1920, 1922x, 1922xx.

Wages at \$1,775 vs. \$937 in U. S. An estimate has been made showing that in 1921 the skilled miner earned on an average \$1,775 while the average wage of all workmen was \$1,450.

at 205, dropping to 152, or 52 per cent. above the 1916 level, early this year. It is claimed that the distribution of wages rose from 1915 to 1920 some \$10,000,000, in spite of the fact that the production in the latter year was one million tons less of coal.

English Coal at Halifax The company is faced today with English coal laid down in Halifax at \$5.00 while West Virginian coal is being delivered at St. John, N. B., after traveling four hundred miles to the cost in the United States, and this St. John price is from \$1.00 to \$1.50 per ton less than the Nova Scotia coal can be delivered.

Letters have been received from consumers of coal, such as the Canada Sugar Refining Co. which states that for the past five years they have not been able to do business with the Dominion Coal Company owing to the price. A letter from H. R. Drummond, the president of the company concludes thus:

Want to Buy Canadian Coal It should be plain to every miner in this country that every ton of coal bought in the United States, which might have been bought in Canada, is a direct loss of the cost of the coal (to which must be added the indirect in the premium on exchange which it tends to augment).

Figures covering the importation of United States coal into Canada during 1921 show a drop in the value per ton from \$4.62 to well under \$3.00. It is estimated that during the past year some 3,000,000 tons of bituminous coal were imported into the Province of Quebec from the United States and that the normal requirements of the province are some 4,000,000 tons per year.

FORDNEY TARIFF NOT SO BAD AS IT IS PAINTED

(Continued from page 1.) The Canadian Nationals were short of freight to reduce deficits. Canadian manufacturers of implement and sewing machines can undercut U. S. prices by rate of exchange; so they have no kick against Uncle Sam on this tariff; and rather than disturb good relations, if I were a Canadian manufacturer right there, I'd cut out this anti-American stuff in their propaganda.

You notice, thorough-bred stock for breeding purposes is duty free. Scrubs not wanted, but harness leathers are free, and so are furs and fur skins. I'd like you to take a Canadian export list, and figure out who gets the best of the deal on the free list of the Fordney Tariff.

Is It A Death Wallow?

When you come to the Fordney Tariff against Canadian farm product, Canada seems to be getting a death wallow; but is she? When somebody aims you a terrific blow and you step aside and it glances the hitter is apt to knock himself over from his own impact.

Let us examine this tariff against Canadian agricultural products. It is a piece of the most genuine folly I have ever read.

Wheat 25c a bushel, flour 50c a cwt., bran 15c. Go easy; for the American eastern farmer buys bran for stock feed. There isn't a miller in the world does not know that the visible supply of world wheat right now is the lowest it has been in your life time or mine.

A duty of 1 1/2c a pound on beef cattle looks like a death blow to our western ranchers; but is it? The tariff bill was reported to the Senate on April the 11th. On April the 12th, the butchers at every back door charged 4 to 5c higher for beef cuts.

As to dairy products, milk, cheese, condensed milk, I see very few signs of better prices for either the American dairyman, or the Canadian, till Europe comes back on the market as a buyer. There are millions of dollars of unsold condensed milk in the United States today.

Canada's Buying Power But there is a still more vital point, where the back kick is right now on a terrible sore spot in the United States. The United States are glutted with unsold manufactured goods.

has cut her purchases from Uncle Sam from almost \$600,000,000 in 1921 to \$365,297,250—that is in eight months she has cut her purchases in half; and the American manufacturers are rubbing their funny bone. To be sure Canada's sales to the United States have fallen from \$417,490,572 in 1921 to \$201,754,865; but that has sent up the cost of living to the American buyer; and his funny bone is not particularly gay just now.

The danger to Canada is of entering on a policy of retaliatory tariffs, or pin-prick recriminations. That is bad, bad business. We sell two-thirds of all our bonds in the United States. We get our best settlers, and investors from the United States; and we desperately need both; the wealth of 8,500,000 people can no more fight the wealth of 105,000,000 people, than a small boy can fight a fellow thirteen times stronger than he is.

The Fordney Tariff has a special provision put in with Canada exclusively in mind. I have this from Mr. Fordney, himself. It permits the President with the approval of Congress to grant special tariff reductions to a favored nation; and I happen to know, the American Cabinet regards Canada as the nation to be so first favored. It would be folly to shut that door with a bang in our own faces.

The Kiwanis and Rotarians all over the United States are holding fellowship, get-together luncheons with Canadians to preserve the good trade relations, till Uncle Sam passes his own crisis. Till then, Canada's game is to sit tight and not strike back as one provincial premier recently foolishly advocated.

GENERATE STEAM BY SURPLUS OF ELECTRIC POWER

(Continued from page 2) Consider its usefulness mainly from two different points of view.

1. From the point of view of the consumer of electric power owning a hydro electric installation, or purchasing blocks of firm hydro electric power on a flat rate power contract, and using this power for manufacturing purposes only during a smaller part of the twenty-four hours. In many manufacturing plants steam has to be produced for cooking processes, drying, humidifying, and in all cases heat is required for heating purposes during six months and paid for. It is well known that electric energy can be transformed into heat energy at a very high efficiency.

The low cost of the steam generator compared with other electrical apparatus for the conversion of electric energy into heat, and the wiring and control apparatus necessary for such equipment, is very much in favor of the steam generator. It can be adapted to even in extreme cases where the load factor is comparatively high, for instance, in pulp and paper manufacturing plants using a considerable amount of power during six days of the week, and having it idle for the seventh day, and at the prevailing cost of hydro electric power purchased in big blocks by these companies that it is economically quite feasible to turn the power which was used during the six days, mainly for pulp grinding, during the seventh day into steam which is always required in such places, either for manufacturing or heating purposes.

2. From the point of view of the Power Company producing and selling hydro electric power, the present commercial depression and slowing up of the industrial activities have left hydro electric companies with a surplus of power for disposal. How long this condition is going to last is uncertain but there is no doubt that a considerable amount of unused power will be available for the next two or three years.

Two Types of Generators In the electric steam generator all electrical energy is converted into heat energy, the electric current passes through a resistance of metal or that formed by the water to be evaporated. Generators of the resistor type are not suitable to voltages above 500 watts and therefore are not adaptable for very large outputs.

Get the Cream of the Trade

"What lovely styles! How do you manage to get all these, delightful novelties?" said the new customer as she looked around her. "I got tired of seeing my customers boarding the trains to buy elsewhere, just because I didn't have some novelty that was being advertised."

Consider this Case There are Hundreds Like it A builder in Toronto built a home—a good home. It cost him \$5,000. He wanted to sell it at \$5,500, making a reasonable profit. He tried to get a first mortgage from a trust company and was offered \$1,900—35 per cent. of its market value.

Factory Building Will be erected to suit purchaser on King Street West lot, near Neilson Street, in Toronto. Light on four sides and ten foot lane in rear.

Why Insure the Desk But Take Chances on the Man? As a matter of course your office furniture is insured against fire loss. What about the brains of the business? When the death of a valuable man occurs, the business is faced with these problems:

RETAILERS STOCK GERMAN GOODS TO MEET COMPETITION

Big Demand for Certain Lines State Hardware Dealers

BUY CANADIAN GOODS

Average Person is Indifferent to Origin of Goods if Price and Quality Are Right

Charges have been made by labor organizations that Canadian merchants have forgotten wartime promises and are pushing the sale of German made goods. Hardware and Metal recently undertook an extensive inquiry among the retail merchants and wholesale hardware dealers to get at the true situation as it exists to-day. From the numerous statements it would appear that while there is a great deal of reluctance on the part of many dealers, they are being forced to stock certain German made goods in answer to the demand that exists for them and the low price that they can be purchased at.

One Western dealer in speaking of German made toys, razors, etc., said, "We carry these goods simply because ever since they have been off the market there has been a demand for them, and while we would like very much to get along without them, it seems impossible so far as our knowledge goes, to secure goods of equal quality where prices are anyway equal. We have customers come here who, when they see that goods are made in Germany, will not buy. The percentage is very small, however, and we believe that the labor man is probably the biggest buyer of German made goods of any customers we have."

Quality and Price

A merchant in the Maritime states that "From the writer's personal experience, the average consumer of hardware seldom considers the country of origin, when purchasing being controlled by the price and quality, as the case may be. The present prices of German made goods are considerably too high to interfere with home made goods. The average labor man buys in an open market and considers that his merchant has the same privilege."

The buyer of one of Eastern Canada's largest hardware wholesalers states, "From a business standpoint I would say; all things being equal, buy Canadian, English or American made goods, but when in the open market, if German made goods are offered at competitive prices, which at the present time they are not, no business house can afford to allow sentiment to override judgment. The public is ever clamoring for lower prices and if the merchant has to buy from foreign markets, in order to get these demand lower prices, in order to satisfy the demands of the public, the fault, if there is any, would seem to lie at our own doors."

On the other hand there are some merchants who find that German made goods are far from welcome and gives the instance of a customer ordering a dozen oyster knives and not having them in stock ordered them from another house. The knives were shipped unopened and the next day they were returned with a note inclosed, "When we want German goods, we will ask for them."

It is such cases as these that the hardware man is confronted with to-day and if he had not already commenced to compete, there certainly is a temptation to do so.

BURBERRY'S LOST HEAVILY

Many British Manufacturers Face Readjustment

Among the companies to report losses in the fiscal year 1920-1921 are Burberry's Ltd., and Wall Papers Manufacturers, Ltd.

The former company which had a capital issue in 1920, reported a trading loss this year of over £450,000. This company makes the famous Burberry cloths and garments, and has rather imposing retail premises in Haymarket Street, not far from Piccadilly Circus.

The trading loss of Wall Papers Manufacturers, Ltd., for the last year of operations exceeds £950,000, the previous balance sheet showed profits of over £800,000.

"One suspects," says John C. Kirkwood, in Marketing, "that these and many other companies have been deficient salesmen of their products—this apart from the shrinkage in inventory value of their merchandise."

BUY BLACK LAKE BONDS

MONTREAL.—The Municipal Debenture Corporation has purchased a \$33,000 6 per cent. bond issue of Black Lake, Que. These are serials maturing in one to ten years.

The Consolidated Mining and Smelting Company reports ore receipts at Trail Smelter for the first week of April amounting to 8,852 tons, 8,422 tons of which were produced by the company's mines. From January 1, to April 7, the receipts totalled 121,344 tons.

GERMANS IN INDIA

Are Recovering Trade there Very Rapidly

Advices to U. S. Department of Commerce state that according to commerce published in Calcutta, India shipped hides and skins to Germany during fiscal year 1919-1920 to the amount of only 60 tons. In 1920-1921, total reached 3,700 tons. Figures for the first half of the current fiscal year are 6,000 tons. At this rate of progress, Germany is sure to recover three-fifths at least of her pre-war shipments of hides and skins from India by the end of the present fiscal year.

B. C. TIMBER IS IN DEMAND IN JAPAN

Cedar is Particularly Popular as Japanese Do Not Use Paint

VICTORIA.—The decline in trans-Pacific freight rates from about \$16 a thousand to less than \$10 has resulted in a revival of Japanese demand for British Columbia lumber and, while the coast industry is still languishing on account of the failure of eastern rail trade and domestic business to meet expectations, the Far Western export development is providing a welcome outlet.

Japan's demand for British Columbia lumber is not merely a temporary development, but will last for many years to come, according to Y. Sato, of Kobe, who arrived in Victoria a few days ago with a party of lumber and pulpwood buyers.

"We are interested mainly in cedar," said Mr. Sato. "In Japan we do not paint our building materials, so that the lumber which best retains its natural color is preferred. Cedar is also light and easy to handle. The use of hemlock in Japan is rapidly growing, and Douglas fir is also finding an important place in the market."

IMPROVED EARNINGS BRITISH EMPIRE CORP.

Present Production Ahead of Last Year—Annual Report Shows Fair Earnings

MONTREAL.—Officials of the British Empire Steel Corporation have not yet decided what attitude they will take towards the new Conciliation Board. In the meantime the coal mines are giving employment to all the company is able to under wages as recommended by the Gillen award.

The annual report will not be read for some little time yet but will show fairly good earnings. The general situation looks much better and the production of coal for March from all the collieries amounted to 343,883 tons as compared with 315,326 in March, 1921. Earnings last year, and still more at present, show a considerable surplus over the dividend requirements on the first preferred stock.

Belcoville, 5,000-acre New Jersey government war village, which cost \$12,000,000, sold for less than \$200,000.

Heads We Win; Tails You Lose

(Continued from page 1)

investors. A report furnished by the Standard Shipping Company itself contains the following list:

- R. M. WOLVIN, president.
- L. Hamilton Wolvin, secretary-treasurer.
- J. W. NORCROSS, director.

The connection, with a president and a vice-president of Canada Steamship Lines as among the leading officials and shareholders of the Standard Shipping Company, is surely about as intimate a one as could be imagined. Such a connection, duplicated with little change, in the case of the buying of vessels and the sale to the company, ditto with machinery, ditto with marine insurance, ditto with coal—and with how many other connections?—is one that we feel is regarded as a DANGEROUS one for any directors to establish and maintain. It is subversive of the best interests of the company whose interests they are supposed to conserve. It is destructive of that degree of public faith that attaches to so many of the managed companies whose securities are widely held, and is a connection, which if not illegal now, certainly will be made so in the near future by Parliament with such an alarming example as that furnished by this company.

The whole affair with its ramifications resembles a game with **LOAD-ED DICE**. Or may be described as a "Heads I Win, Tails You Lose" proposition.

HALF MEASURES MUST FAIL

A persistent rumor has been prevalent in financial circles this week of efforts being made by investment houses who have been considering a new bond issue for Canada Steamship Lines, to secure the consent of a man prominent in industrial circles, to assume the presidency, upon which the present holder of the office, J. W. Norcross, would become general manager of the company.

If these efforts to secure a new president are a belated concession to the force of public opinion, they are at least welcome. But the policy of retaining the president in any connection whatever still exhibits an astonishing failure to realize the source of weakness he has become to the company through the belief that he has abused his position in almost countless directions to make gain out of transactions with his own company.

Even had every connection been operated without undue personal gain to himself or loss to his own company, the multiplicity of relationships was such as thoroughly and permanently to alienate public confidence in him and his management. Where these connections have caused heavy losses to Canada Steamship Lines—as has been the result in some instances—the investing public would resent his being retained even if he were removed from the presidency. For to them he stands as the chief transgressor, and the one who gained the most financially.

Any financial house that seeks to deserve and secure the good-will and confidence of the company's own shareholders and investors outside, must realize this; a failure to do so will be regarded as a strange and stubborn defiance of the elementary principles that should govern the relations between an investment house and its clients.

JAMAICA GETS BEST OF PREFERENCE PACT

Islanders Are Evidently Afraid of Retaliation on Part of the States

From Our Own Correspondent
HALIFAX.—The preference which Jamaica has decided to accord Canadian products is rather slight compared with the customs preference which Canada has been giving Jamaican products for nearly a year, according to information received here.

Canada's principal article of export to Jamaica is flour, and on this the preference will be 3 per cent. ad valorem. Jamaica's principal export to Canada is sugar and the preference on this is now equivalent to about 30 per cent. ad valorem. The highest preference which Jamaica gives Canada is 5 per cent.

During the first nine months of the operation of the Canadian preference on Jamaican products our imports of Jamaican cocoa and coffee trebled, spices doubled, grapefruit quadrupled, hides and skins doubled, vegetable oils increased fourteen fold, and raw sugar went up 4,000,000 lbs. These gains were made in a depressed year.

In the nine months the loss to Canadian customs revenue, assuming the same imports had been made, was about \$400,000, while if the Jamaican preference had been operative the loss to the island revenue would have been only \$18,000.

Opposition to the preference in the island legislature was mainly based in the fear that it would provoke retaliatory action by the United States, a fear which kept Jamaica from joining the other British West Indies in negotiating a trade treaty with Canada years ago. It was pointed out, however, that though Trinidad had entered into a preferential agreement with Canada, there had been no American action against the large imports of Trinidad products into the United States, and it was argued that the American authorities were ready to recognize reciprocity arrangements between different parts of the Empire as not unlike free trade between the various states of the American Union.

DOMINION TEXTILE'S DECREASED EARNINGS

Drop in Prices Had Material Effect on Profits for Past Year

MONTREAL.—While it will be several weeks before the annual statement of Dominion Textile Co. is issued, it is understood the net earnings will show a considerable decline over those of the fiscal year ending March 31, 1921. Production and sales have kept up unusually well considering conditions but the sharp cut in prices have reduced the value of the turnover, and hence, of the profits. At the same time the company did well, its financial position is very strong, and the outlook bright for a continuance of business. The proposed new mill at St. Lambert naturally must await more stable conditions.

Montreal Light, Heat & Power Consolidated

23rd DIVIDEND
Notice is hereby given that a Dividend of One and One-quarter per cent. on the Paid-up Capital Stock of the Company (being at the rate of Five per cent. per annum) for Quarter ending April 30th, 1922, has this day been declared.

W. H. JOHNSON,
Secretary-Treasurer,
Ochre River, Man.

Lydiatt Says—

Lydiatt's book, 1922 edition, the standard authority on rates and data concerning Canadian advertising media is just off the press. The information it gives concerning Canadian financial papers indicates that THE FINANCIAL POST is far ahead of all other papers in its field.

Here are the facts concerning the circulation of Canadian financial papers as given in Lydiatt's:

Paper	Sub. Price	Circulation
FINANCIAL POST	\$5.00	Publishers report for 6 months ending December 31, 1921:
		Total net paid
		Total distribution
Second paper	3.00	Publisher states average for 1921:
		Total net paid
		Total distribution
Third paper	3.00	Publisher states gross average for 1921....
Fourth paper	2.00	Publisher states average for 1921.....
Fifth paper	3.00	Publisher states gross average for 1921....
Sixth paper	2.00	Publisher states gross average for 1921....

In Lydiatt's the name of THE FINANCIAL POST is printed in bold type. This means that its circulation is audited by the authoritative and independent Audit Bureau of Circulations, which sends its auditors into our office twice a year and audits THE POST'S paid circulation as carefully and frankly as a firm of chartered accountants audits the financial records of an industrial corporation. THE POST is the only Canadian financial paper the circulation of which is submitted to this independent scrutiny and analysis. The circulation figures of THE POST are facts, not claims.

Just a point about the difference of about 750 between the net paid circulation of THE POST and the total distribution. Advertisers who get their paper as such,

and advertising agencies, are not included in THE POST'S paid circulation although they form a substantial and valuable addition to the circulation of the advertiser in THE FINANCIAL POST is buying.

Note too that THE FINANCIAL POST has the highest subscription price of any of the papers in the list. The readers of THE POST find it so much more valuable to them than any other paper that they readily pay the extra price; they know that the paper is worth it. The higher subscription price insures the advertiser that THE POST is read thoroughly by the men who take it.

It is only because THE POST is the best paper editorially—in its news, views and facts—that it is so dominant in circulation.

The advertiser who has a message for business executives, for investors, for the sane thinking men of Canada who comprise the solid bulk of the nation's purchasing power, can reach them in THE FINANCIAL POST. Its readers are of that class who in difficult years can buy substantially—be it bonds, stocks, insurance, motor cars, furniture or what not—well balanced people who in boom days do not buy recklessly and who in more difficult days do not get panicky and close down altogether.

The Financial Post Gives the Advertiser "QUANTITY of QUALITY."
